PROPOSED HOUSE, SOUTHGATE, BENNETTS LANE
BLACKPOOL, FY4 5BE
PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A residential development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination and landfill gas issues.

SITE DESCRIPTION

Southgate is an existing house, on a large L shaped plot, located to the north of Bennetts Lane in Blackpool, and at OS Grid Reference 332700, 432780. The site, a former garden, is the 20 by 20 metre southwest leg. Inspected on 17/12/20 by Mr D Lord, the site is a vacant plot, surfaced with wet, very soft, topsoil with a new hardcore access drive along the northeast side. There are no notable features, no signs of contamination and no indication of contaminative uses. Anecdotal evidence from the land owner, and aerial photographs, indicate the site was previously a well maintained garden.

This is a residential area with houses to the north, east and west, and a field to the south. The area slopes gently down to the east.

PROPOSED DEVELOPMENT

It is proposed to build a detached house at the northwest of the site with a detached garage at the northeast of the site together with associated gardens and driveway.

TREES

There are two conifers at the southwest corner of the site, about 6 to 8 metres high, and two mid-way along the west boundary, about 4 metres high. The east and south boundaries are line with hedges.

This is not an accurate arboricultural survey.

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

NOT INCLUDED IN THE REPORT

- Arboricultural Survey.
- Asbestos Survey
- Invasive Plant Survey (Japanese Knotweed etc.).
- Mining Risk Assessment.
- River/Tidal Flood Risk Assessment.
- Surface Water Flooding.
- Underground Services Survey.

General comments may be made with regards to the above where there are obvious features seen on site, in the data review or where they are applicable to the environmental and geotechnical risk assessment. These general comments do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 11/12/20
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 17/12/20.

This report is referred to as a Preliminary Risk Assessment (PRA), alternative names ‘Phase I’ Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Pollution incidents
- Water abstraction points
- Source protection zones
- Radioactive sites
- Landfill sites
- Hazardous substances sites
- Fuel stations
- Sensitive land uses

Geology of Site

The geological map indicates that the underlying solid rocks are Singleton Mudstone.

Surface drift is shown as blown sand, of unknown thickness, probably overlying peat and/or tidal flat deposits. Running sand stability hazards are shown as low risk, with other natural subsidence hazards are shown as very low to no hazard.

Radon

The site is in a lower probability radon area as less than 1% of homes in the area are above the radon action level. Radon protection measures are not required.

Surface Water (Hydrology)

There is a stream/drain 32 metres south.

The nearest discharge consents is for final/treated effluent to Spen Dyke, 155 metres east*

The area slopes down to the east and the flow of surface water is expected to be in this direction.

* not relevant due to distance/severity/significance

Groundwater (Hydrogeology)

The solid rocks under the site are indicated as a Secondary B aquifer.

Superficial (drift) deposits are classed as a Secondary A aquifer.

Groundwater flow is likely to follow the topography and move to the east.

Flooding (General)

Information from the EA flood maps suggests areas where rivers would flood. There are two zones:

- 'normal' flooding, based on a 1 in 100 chance of it happening in any year (1:200 if flooding is from the sea). This is normally closer to the river.
- 'extreme' flooding, further away from the river and having a 1 in 1000 chance.

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes
- blocked drains, sewers and culverts
- inadequate drainage
- cloudbursts/flash flooding overwhelming normally satisfactory drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding

The site is shown to be in an area with potential for groundwater flooding to occur at the surface.

Flooding from Rivers

The site is shown to be clear of flooding from rivers.

Surface Water Flooding

The site is shown to be clear of surface water flooding with areas at risk of 1 in 1000 year surface water flooding immediately northeast and southwest.

Nearby Industry

There are the following trade directory entries within 150 metres:

- Domestic Cleaning Services, 120 metres southwest, active*

not relevant due to distance/severity/significance

NEARBY BOREHOLES

The following information, and enclosed borehole logs, contain British Geological Survey materials © NERC (2020). The BGS hold records for a borehole 37 metres southwest. This shows:

Made ground	0.0 to 1.3 metres
Sand	1.3 to 3.3 metres
Peat	3.3 to 4.2 metres
Silt	4.2 to 5.6 metres
Sand	5.6 to 8.3 metres
Clay	8.3 to >15 metres

SITE HISTORY

Date	On Site	Off Site
1847–48 (1:10,560)	Undeveloped plot.	Site is surrounded by undeveloped fields.
1911-12 (1:2,500)	Little or no change.	Building immediately west. Many greenhouses within 250m.
1932 (1:2,500)	Little or no change.	Greenhouses at plant nurseries 15m northwest, greenhouses immediately west. Confectionary works 145m northwest.
1955 (1:10,000)	Little or no change.	No relevant change
1982 (1:10,000)	Little or no change	Plant nurseries to north, east and west
1993 (1:1,250)	Little or no change.	Works 195m northwest. Warehouse 185m northwest and 145m northwest. Garage 170m northwest. Drain 20m south and 40m east.
2020 (1:10,000)	Little or no change.	Site is situated in a residential area with several nearby plant nurseries.

Aerial photographs, and a 2009 street view image, show a well tended lawn

DISCUSSION

Contamination

The site is a previously undeveloped section of garden. There has been no use of the site from which high levels of contaminants would be expected, and no obvious signs (made ground, tanks etc) of contaminative uses on site.

There were previously plan nurseries in the surrounding area, there have been no nearby industrial, or other, land uses that will affect the site and not pollution incidents on or close to the site.

The proposed development will be a house with detached garage and gardens. The findings suggest contaminants are unlikely to be present at high levels and no pollutant linkages are expected to arise. The findings suggest no risk to householders.

Controlled Waters

There is an underlying Secondary B Aquifer, likely to be beneath sand, peat and clay. There are no nearby water abstraction points or source protection zones.

There is a stream/drain 32 metres south.

Although the gardens will allow rainwater to pass through the surface soils, the findings suggest contamination is unlikely at high levels. The anticipated underlying, deep, clay will further impede the migration of water and no risk is expected to controlled waters.

Landfill Gas/Ground Gas

There are no landfill sites or significant filled features within 250 metres of the site.

It is expected that the site will be underlain by peat beneath the shallow sand. This can be a source of ground gases, at raised levels but not usually at high enough volume to flow out of the ground. If peat is found to be a low risk to the development is considered possible.

Radon

Radon protection measures are not required.

Flooding from Rivers

The Environment Agency maps show that this site is clear of flooding from rivers.

Groundwater and Surface Water Flooding

The site is shown to be clear of areas of surface water flooding with areas at risk of 1000 year surface water flooding immediately to the northeast and southwest.

INDUSTRY PROFILE

The site has had no industrial use.

CONCEPTUAL MODEL

A conceptual model based on the source-pathway-receptor concept is included with this desk study to show the potential pollutant linkages with this site.

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users	Inhalation	No
	Off-site	Migration off-site	No
Inorganic contaminants	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	No
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Sulphate	Building fabric	Concrete directly in contact with soil	No
Hydrocarbons	Householders	Direct contact, ingestion, from home grown vegetables, ingestion and inhalation of dust	No
	Service pipes	Seeping into drinking water pipes	No
	Groundwater	Migrating towards	No
	River/stream	Migrating/leaching towards	No
Hydrocarbon vapours	Householders	Inhalation of vapours indoors and outdoors	No
Ground gas	End-users - in buildings	Seeping into buildings, explosion, asphyxiation	Yes (if peat present)
Radon	End-users - in buildings	Seeping into buildings	No

CONCLUSION

Contamination

Taking into account the past use of the site it is considered unlikely that high levels of contamination will be present on the site.

A watching brief for unexpected contaminants should be maintained. If unexpected contaminants (e.g. asbestos, oily material, unusual smells) are seen, especially during excavations, work should cease and the consultant be notified and the site inspected. This may require testing a remediation strategy may be required.

Whilst the findings suggest no further action is essential, a limited investigation would be beneficial. This would help to classify excavated soils for disposal off-site and design buried concrete.

A test to determine the correct water pipe material is recommended.

Controlled Waters

The findings suggest no risk to controlled waters no further action is considered necessary.

Landfill Gas/Ground Gas

There are no landfill sites or significant filled features within 250 metres of the site. However, it is expected that the site will be underlain by peat beneath the shallow sand which can be a source of ground gases.

A low gas risk is considered possible, at worst, and bearing in mind the proposals is for a single house, it is considered that the anticipated risk can be adequately dealt with by installing precautionary gas protection measures, in-lieu of testing. The following are considered to be appropriate measures for the anticipated level of risk.

- Ventilation of confined spaces within building
- A well-constructed ground slab/suspended floor with sub-floor venting.
- A low-permeability gas membrane (see membranes below).
- Minimum penetration of ground slab by services.
- Also gas precautions should continue across the cavity.

The following membrane (or equivalent) is suggested:

- Visqueen Gas Barrier (blue with foil layer, resists hydrocarbon vapours, methane, carbon dioxide and radon)

Each membrane should be used with the appropriate matching cavity tray (or cavity membrane), DPC and service duct ‘top hat’. Joints to be lapped and sealed.

The membrane will require independent inspection.

Radon

Radon protection measures are not required.

Flooding

The EA maps indicate that the area is clear of flooding from rivers.

The maps indicate that the area is clear of surface water flooding, with areas at risk of 1 in 1000 year surface water flowing immediately northeast and southwest. These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. For greater confidence a detailed flood risk assessment should be obtained.

Yours faithfully
on behalf of Worms Eye Ltd

1. This report should be considered in relation to the objectives agreed between Worms Eye and the Client, outlined in the introduction.

2. For the work, reliance has been placed on publicly available data, obtained from the sources identified in the report. The information is not exhaustive and further information may be available from other sources. When using the information it has been assumed it is correct, and no attempt has been made to verify the information.

3. This report has been produced in accordance with current UK policy and guidelines, for land and groundwater contamination, enforced by the Local Authority and the Environment Agency.

4. During the site walkover, reasonable effort was made to obtain an overview of the site. However, no attempt was made to enter areas that are unsafe, a risk to health and safety, locked, barricaded, overgrown, or areas not made accessible.

5. Access, the presence of services and activities on the site, limited locations where sampling could be carried out and the techniques that could be used.

6. Assessments are based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.

7. The conclusions and recommendations provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.

8. Worms Eye cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright of this report, and other plans or documents prepared by Worms Eye, is owned by them, and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies may be made and distributed by the client, as expected, in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability, or warranties, shall be extended to other parties by Worms Eye, without their written agreement.

9. New information, revised practices, or changes in legislation, may necessitate the re-interpretation of the report, in whole or in part.

General Notes

CDM REGULATIONS 2015
The client must abide by the Construction Design and Management Regulations 2015. The client must appoint a contractor, if more than one contractor is to be involved, the client will need to appoint (in writing) a principal designer (to plan, manage and coordinate the planning and design work) and a principal contractor (to plan, manage and coordinate the construction and ensure there are arrangements in place for managing and organising the project).

Domestic clients
The domestic client is to appoint a principal designer and a principal contractor when there is more than one contractor, if not your duties will automatically transferred to the contractor or principal contractor.

The designer can take on the duties, provided there is a written agreement between you and the designer to do so.

The Health and Safety Executive is to be notified as soon as possible before construction work starts if the works:

(a) Last longer than 30 working days and has more than 20 workers working simultaneously at any point in the project.
Or:
(b) Exceeds 500 person days.

PARTY WALL ACT
The owner, should they need to do so under the requirements of The Party Wall Act 1996, has a duty to serve a Party Structure Notice on any adjoining owner if building work on , to or near an existing Part Wall involves any of the following:
* Support of beam
* Insertion of DPC through wall
* Raising a wall or cutting of projections
* Demolition and rebuilding
* Underpinning
* Insertion of lead flashings
* Excavations within 3m of an existing structure where the new foundations will go deeper than existing foundations, or within 6m of an existing structure where the new foundations are within a 45 degree line of the adjoining foundations.
A Part Wall Agreement is to be in place prior to the start of work on site

THERMAL BRIDGING
Care shall be taken to limit the occurrence of thermal bridging in the insulation layers caused by gaps within the thermal element, (i.e. around windows and door openings). Reasonable provision shall also be made to ensure the extension is constructed to minimise unwanted air leakage through the new building fabric.

All dimensions are in millimetres unless otherwise stated.
No dimensions to be scaled from this drawing.
It is the responsibility of the Contractor to check all sizes, site dimensions and positions of drains and services prior to setting out or shop work. Any discrepancies to be reported to the contact details below.
Liability shall not be taken for any defects in this drawing unless, prior to commencement,this drawing and all its dimensions have been so checked and verified
Proposed floor levels will be no lower than existing floor levels and flood protection measures in accordance with Environment Agency guidelines will be incorporated into the build.

Existing structure including foundations, beams, walls and lintels carrying new and altered loads are to be exposed and checked for adequacy prior to commencement of works and as required by the Building Control Surveyor.

This drawing and all the information contained thereon is subject to copyright and must not be reproduced in whole or part without the express permission of RDJ Creative Ltd.
Any unauthorised reproduction infringes copyright and may lead to prosecution.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Envirocheck®

LANDMARK INFORMATION GROUP®

Lancashire And Furness

Published 1891 - 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.
