

# Design Statement

## Introduction:

We replaced all of our windows after we moved in. The new ones were wooden sash at the front and UPVC sash at the side and rear. We were not allowed UPVC at the front at that time but later neighbours were allowed to put in the same windows that we wanted.

## Objectives:

To replace the three front windows as they are now going rotten and do not reduce noise which is now continuous due the increase in traffic on the A606.

## Proposal

We propose replacing these windows with Everest Heritage windows\_which will match the wooden ones. They will be white and have the same panes and external bars instead of the usual bars between the glass. This type of window achieves far better insulation for bot noise and heat retention(see pics 1 and 2)
