Bird Breeding Season and Vegetation Removal

It is recommended that vegetation which needs to be removed is done prior to the bird breeding season. [1st March - 31st August] If this is not possible within this period, the vegetation removal should be carried out under the supervision of an Ecologist.

If birds are found to be breeding in the vegetation which needs to be removed then vegetation removal in the area surrounding the nest must be delayed until the eggs have hatched and the young birds have left the nest.
