Dear Sir

Please find enclosed my findings on the Silver Birch Tree at Church Lane Kingston Canterbury Kent.

Silver Birch Tree is situated beneath power lines, on the edge of the driveway at the side of the bungalow. The roots showing signs of lifting the driveway. The tree is less than four metres from the bungalow.

Previous pollards on the tree, now showing small cavities and decay at the pollard points.

In my opinion the tree is of little value, needing to be pollarded every two years, due to being close to overhead power lines.

I recommend to section dismantle the tree to ground level and stump grind, and replace with a native tree within the proximity of the garden, and away from the bungalow and power lines.

Yours sincerely
