I have reviewed the acoustic assessment and given the information available appears a reasonable representation of the likely impact. I would have preferred more detail on the location and construction details of the ranges and the firing chambers to better judge if the assumptions made in the report concur with the actual construction, locations etc.

As the events are likely to be as described, being irregular, of limited duration and during the day, the potential for intrusion is limited, I therefore accept the methodology and findings of the noise assessment.
