

Colorcoat Urban®

Specification Guide

Tata Steel Colors

Introduction

Tata Steel introduces a product that provides an innovative and sustainable solution for roofs and walls, specifically designed for the urban environment.

- Matt colour range specifically designed for the urban fabric.
- Stable colour ensures an aesthetic of consistent, even shade.
- Zero maintenance for up to 40 years.
- Can be laid to a minimum pitch of 5°.
- Eco-designed to remove environmentally harmful elements and deliver the lowest impact without reducing the performance.
- 100% recyclable and Carbon Neutral, via a government approved carbon measuring, reducing and offsetting scheme.
- Simple integration of renewable technologies, helping achieve forthcoming legislation.

The specification guide explains the standard range of details and components used to design a roof using the Colorcoat Urban® system.

Particular attention should be made of the panel widths for low pitch applications in high wind speed locations.

Colour choice

The naturally inspired colour range can blend with the urban landscape, ensuring the building harmoniously integrates with the local vernacular.

Winter Sky 01
RAL 7040

Alaska 02
RAL 7000

Merlin 03
BS 18B25

Anthracite 04
RAL 7016

Oxidised 07
RAL 8014 or 0502010

Terracotta 05
BS 04C39

Green Grey 06
RAL 6003 or 1504010

Patina 08
RAL 6027 or 1807025

Urban fabric

The Colorcoat Urban® colour range has been inspired by architects specifically for the urban environment.

As such they partner harmoniously with existing buildings and building envelope materials, including glass, wood, brick, stone and render.

Matt shades

The tonal colour range of the matt shades have been carefully selected. With the ability to achieve a stable colour ensures a consistency of even colour, which is unachievable from most other roofing materials.

Note:

Hand sample requests are available online at www.colorcoaturban.com or via Colorcoat Connection® helpline on +44 (0) 1244 892434.

Wind Speed and Fixing Chart

Essential points

- For all buildings between 1 – 8 stores at a pitch 5° - 45°
- Please refer to the following specification

- In accordance with BS 6339-2 and BS5534 & BS EN 1991-1-4 Section 7.2.5
- Specification of the 514mm/305mm wide panel is dependant location, wall height, storey height and roof pitch.*A structural engineer should complete a wind uplift calculation for your specific area before making any final decision. Please note table below is for guidance only;

- When Building over 3 storey or in exposed locations the structural engineer should complete a wind uplift calculation and provide Tata Steel with details so the best fixing solutions can be developed.
- Please follow our recommendations for fixing the Urban Seam® profile as described.
- Fixings along the eaves, verge and Mono Ridge backing plates require fitting at 200mm fixing centres. Same principle applies to wall.
- Fixings into the panel nailing strip must be at 180mm centres.
- For detailed nailing patterns please refer to fixing of Urban Seam profile section in the installation guide.
- Urban Seam® profile is fixed to 18mm OSB 3, WBP or Marine Ply board. (15mm board is used for SIP panels) For other board types or dimensions please contact our technical advice line.
- For any advise and technical assistance in regards to wind speed or fixing positions please e-mail or contact our technical advise on Colourcoaturban@tatasteel.com

Roof Pitch (Degree) & Wall	No. Storeys	Wind Speed V_s	Panel Width 305mm	Panel Width 514mm

≥ 10	<3	<25	✓	✓
	4-8		✓	✓

Ordering the Roof or Wall

Essential points

Tata Steel manufactures the roof or wall based on measurements provided by the customer.

These details can be found on the drawing produced by the roof truss or SIP panel manufacturer.

The maximum panel length is 12.5 metres

Estimating straight roofs or walls

For the straight roof we need four details: length (L), rafter length including fascia board (R), angle of pitch (a) and whether it is mono or duo pitch roof. For a wall we need length (L) and height (H) and any potential junctions or breaks.

Estimating fixings

For the Urban Seam® profile at 514mm wide then you will need a minimum 6 fixings per square metre, and four fixings per linear metre along the eaves and verges, and at the ridge it will be 8 fixings per linear meter for the duo pitch and 4 for the mono pitch. If using screws for the ridge then the spacing is every 500mm halving the number of ridge fixings.

Panel Lengths

The panel maximum length (R) is 12.5 metres, this is due to the thermal expansion of the panel. How to deal with roof over 12.5 metres is to split the panels or create a change in fall in the roof, for example a mansard or join two panels.

Urban Clamp

The urban clamp has been specially designed for Colorcoat Urban® seam profile. When attaching the clamps they are designed to engage with the seam as shown. For horizontal seam applications, the set screw must be accessible from the top for tightening.

The setscrews are opposite the open (or overlap) side of the seam. Only one orientation is possible with the Urban clamp for it to engage with the seam correctly.

For the maximum holding strength, setscrews should be tensioned and re-tensioned as the seam material compresses.

Please use the Urban clamp responsibly! Please see the load test results below based on pulling load normal to seam. The user and/or installer of the Urban Clamp are responsible for all necessary engineering and design for the intended use of the Urban Clamp in any assembly or application.

Please note one M8 bolt and one set screw is supplied with every Urban Clamp.
