Objection

I have lived in Offham nearly 35 years. During that time we have endured the many problems associated with the Landfill Site. In particular odours, traffic, dust, noise until eventually, after many planning applications, the (over) filling ceased. Since filling, methane has been extracted and will do for many decades. In the meantime the site has not been looked after by its present owners FCC but it was always our understanding that the site would be managed efficiently and restored to its original green space use with the path restored. We now understand the space of 27 acres is to be filled with solar panels completing wrecking any hope we have of future accessible green space. As villagers not only do we struggle with Kings Hill rat run traffic, we also have daily quarry blasts from Blaise Farm and smells from the new AD (Digester) plant. We have considerable passing farm traffic following local

expansion and all in all the addition of this solar farm is the last straw. We as suffering residents of 35

years are wholly against this proposal
