Dear Sir/Madam,

I write in connection with tree application 21/0035/TRE.

My client at 5 Commoncraig Place, Inverkip asked me to look at the trees opposite their house and address some of their concerns. I visited the site on three occasions meeting with the clients and the neighbours.

I have advised my clients to :-

- 1) Reduce the large Sycamore adjacent to the grounds of the flats at the top of Station Road. I have recommended a 20% reduction as this tree is multi stemmed from the base and situated on the boundary.**
- 2) Reduce the Silver Birch by 20% as it is growing out from under the canopy of the trees above and is leaning towards the road.**
- 3) Remove the Ash tree as this is self seeded and situated too close to adjacent trees. This tree is not a good example and will cause further issues if not removed.**
- 4) Remove two limbs off the Beech tree as it has signs of squirrel damage and the two branches in question are overhanging the neighbours BBQ area.**

All of the above works are intended to maintain the health of the existing trees within the plantation and promote continued healthy growth.
