OUTSTANDING QUALITY IN EVERY DOME

With over 30 years' experience in manufacturing quality products from our midlands-based premises, choosing TruDomes means choosing an established family business with proven results.

We pride ourselves on our Great British manufacturing and high-quality materials, which is why we use aircraft-grade aluminium and high quality PVC in every dome – this means not only are our structures lightweight, they're also weather and flame retardant and corrosion resistant.

Our covers are also made of the highest quality PVC. As standard, you can expect them to have the following technical properties:

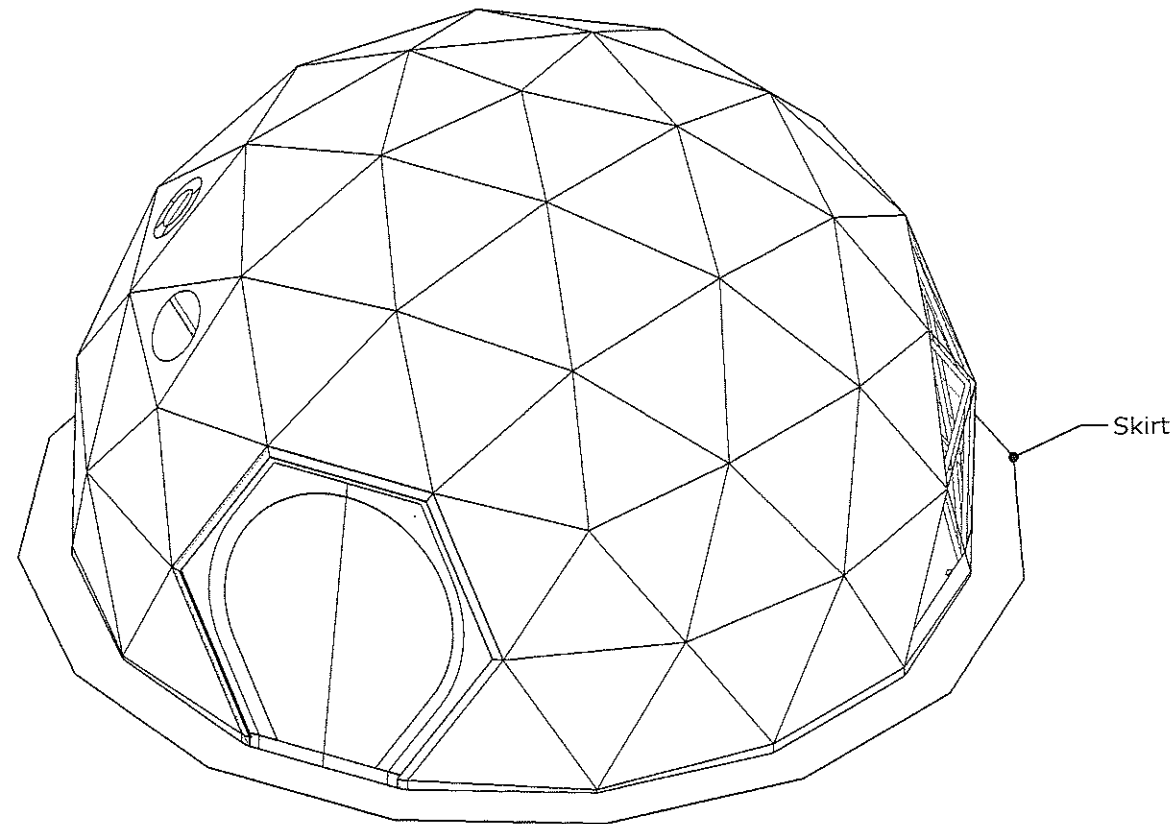

- Flame retardant
- Weather resistant
- Lacquered to ensure longevity, low maintenance (being easy to clean) and a luxurious light, glossy finish
- Low-wick to restrict the ingress of moisture from the inside

BUY WITH CONFIDENCE

Satisfaction Guaranteed

Every TruDome structure comes with a 100% satisfaction guarantee.
