

Window is viewed from outside

Site:

Check the size of the window Remove the existing window Cut back the plaster and the window board Fit the new window, screw and foam in position

Seal the frame with a clear fix-all

Clean the window and direct surrounding area

Show the customer the window and

explain how it operates

Ask the customer to sign the delivery ticket

The window is to be manufactured in Accoya

The frame is fitted with two sets of Aquamac weather seals

The opening lights are hung on 3" brassed bearing butt hinges and held closed with a locking fasteners (Kirkpatrick 1181 NVL) and a stay per light (Kirkpatrick 1180). The ironmongery is black iron curly tail. The stays are fitted the "NEW way"

The opening lights are glazed with 24mm clear annealed Pilkington KS argon filled double glazing with grey warm edge spacer bar. The glass is glazed on 2mm black security tape and a timber bead on the outside. All units are factory glazed

The frame joggles will be removed before decoration

The windows are primed in Teknos white paint. The windows are then given two top coats. See list below for the colours

- Inside of frame -
- Outside of frame -
- Opening lights

mould, painted the same colour as the frame
