## 1 INTRODUCTION

- 1.1 The client is proposing to redevelop the site with new build residential units and calfordseaden LLP has been instructed to undertake the assessment in accordance with the recommendations contained in BR209 Site Layout Planning for Daylight and Sunlight A Guide to Good Practice and BS 8206-2.
- 1.2 This report has been prepared by calfordseaden LLP solely for London Borough of Southwark. No representation or Warranty (expressed or implied) is given as to the accuracy, completeness, or reasonableness of the report to any other parties, who rely on the report and its contents entirely at their own risk. Calfordseaden LLP shall have no liability whatsoever to any other parties for any inaccuracy in, omission from, or use of the report or relating to any decision based on the report.

## 2 BASIS OF ASSESSMENT

- 2.1 In BR 209 there are two main methods for assessment of daylighting to dwellings and a further two methods for assessing sunlight. These are further explained in the British Standard BS 8206-2: 2008.
- 2.2 The three main criteria considered for daylighting are the Vertical Sky Component (VSC) measured on the face of the window, the Average Daylight Factor (ADF) measured within the room and the daylight uniformity measured using the No Sky Line (NSL). This latter is the series of points within the room at 850 mm (tabletop height) above floor level where the sky is no longer visible through the window(s).
- 2.3 **Daylight**
  - 2.3.1 As a preliminary assessment BR209 suggests the use of a series of reference points around the proposed building, for new developments. If none of the surrounding obstructions subtends an angle to the horizontal, at the reference point, of greater than 25 degrees then there will be the potential for good day-lighting in the interior and there should therefore be no need to produce further calculations to demonstrate the levels of daylighting available.
  - 2.3.2 If an obstruction is taller than this then there may still be the potential to achieve a satisfactory level of daylighting if the obstruction is not continuous and is narrow enough to allow adequate daylight around its sides and here further calculations should be used.
  - 2.3.3 BR209 also describes a simple assessment using 45 degree lines in the horizontal and vertical planes from the extremities of an obstruction and where both these lines crossed above the centre of any window there is then a likelihood that the daylighting in the room will be adversely affected. For this reason, we have concentrated on those windows, which fall within the 45-degree lines. If the results proved to be adverse for all windows in this area then our scope would be extended.
  - 2.3.4 The amount of skylight falling on a vertical wall or window can be quantified as the Vertical Sky Component (VSC). This is the ratio of direct sky illuminance falling on the vertical wall at a reference point, to the simultaneous horizontal illuminance under an unobstructed sky. The maximum value is 40% for a completely unobstructed vertical wall.
  - 2.3.5 For a room with non-continuous obstructions, there is the potential for good daylighting provided that the VSC at the window position, 2 metres above ground is not less than the value for a continuous obstruction of altitude 25 degrees which is equal to a VSC of 27%. This is a complex way of saying that sufficient day-lighting can be achieved by other means and the guidance

suggests that if the VSC of 27% is achieved within 4 metres horizontally from any window then sufficient daylighting is still likely to be achieved.

2.3.6 At paragraph 2.1.6 of BR209 it advises that where a room is served by a single window and the VSC meets or exceeds 27% then conventional window design will usually provide adequate daylighting. Where the VSC value is between 15% and 27% then larger windows or changes to room layout will normally be required and if the value is between 5% and 15% then large windows will almost certainly be required. Below this value the room is unlikely to benefit from adequate daylighting.

2.3.7 A modified form of these calculations can be used for existing buildings to determine the impact potential of new developments but, as in this case, we prefer to use our software for this process as the results are more useful and relevant. Our software has been produced specifically for this purpose and is used by other consultants in the field. It is our practice to benchmark test results periodically against the manual methods described by the BRE and against our competitors who use different software providers. In this way we can ensure the relative accuracy of our results.

2.3.8 Again according to BR209, when considering existing buildings, if the VSC or the no-sky line contours produce results which reflect a reduction of daylight, caused by any new obstruction, below 80% of that which was originally available and the VSC is less than 27%, then the loss would be noticeable to the occupants.

2.3.9 A further measure, which can be used, is the average daylight factor (ADF), which is the average illuminance internally, divided by the unobstructed illuminance externally and multiplied by 100% and can be calculated as follows:

2.3.10 The diffusible visible transmittance of glazing (0.68) multiplied by the net area of the window multiplied by the angle of visible sky measured at the face of the window (which is obtained using the VSC and checking the table in the guidance notes) divided by the total area of the rooms internal surfaces multiplied by One minus the average internal reflectance, squared and expressed as a percentage.

2.3.11 The BRE guidance accepts that, where supplementary electric lighting is available, a figure of 2% will produce a predominantly daylit effect but that the recommendations for dwellings are 2% for Kitchens, 1.5% for Living Rooms and 1% for Bedrooms as minimum figures.

2.3.12 The ADF should not be used as a comparative tool for existing building but will provide an indication of the availability of daylight after the proposed development provided that the correct values are used for glazing transmission and internal reflectance.

## 2.4 Sunlight

2.4.1 Sunlighting is measured using sunlight availability indicators or sun path indicators, which are also reproduced in the guidance by P J Littlefair for a selection of latitudes. Here too we have computer software to produce the results.

2.4.2 The British Standard recommends that at least 25% of annual probable sunlight hours be available at the reference point, including at least 5% of annual probable sunlight hours in the winter months, between Sept 21 and March 21. This is checked using the horizontal equinox line on the sunlight availability indicator.

2.4.3 When using the sunlight indicator, any obstructions to the north can be ignored as can any windows that do not face within 90 degrees of due south.

2.5 The current BRE guidance also sets out limited parameters for assessment of shadow in amenity space and stipulates that at least 50% of the area considered should have the potential benefit of 2 hours of direct sunlight on 21<sup>st</sup> March each year. If an existing garden or outdoor space is already heavily obstructed then any further loss of sunlight should be kept to a minimum. If as a result of new development, the area which can receive two hours sunlight on 21 March is reduced to less than 0.8 times its former size, this further loss is significant.

### 3 HOUSING SUPPLEMENTARY PLANNING GUIDANCE

3.1 Under the London Plan, Supplementary Planning Guidance is provided where the level of guidance required is too detailed for inclusion in the development plan, or if a rapid policy response to is needed to an emerging issue. It provides support for statutory development plans, but carries less weight than them when planning matters are considered and cannot create new policies.

3.2 In March 2016 the Housing Planning Supplementary Guidance was updated and included the following paragraphs relating to daylight and sunlight design:

3.2.1 *1.3.45 Policy 7.6Bd Guidelines should be applied sensitively to higher density development, especially in opportunity areas, town centres, large sites and accessible locations, where BRE advice suggests considering the use of alternative targets. This should take into account local circumstances; the need to optimise housing capacity; and scope for the character and form of an area to change over time.*

3.2.2 *1.3.46 The degree of harm on adjacent properties and the daylight targets within the proposed scheme should be assessed drawing on broadly comparable residential typologies within the area and of a similar nature across London.*

3.2.3 *2.3.47 Quantitative standards on daylight and sunlight should not be applied rigidly, without carefully considering the location and context and standards experienced in broadly comparable housing typologies in London.*

### 4 INFORMATION PROVIDED OR OBTAINED

4.1 We have been provided with the following information that has been used to develop our electronic model:

- Details of proposed scheme
- Existing building on the site and existing surrounding buildings
- Aerial photography from Google Earth and Bing
- Site visit, photographs and measurements
- Internal arrangements within existing surrounding buildings
- Property Drawings from Websites etc.
- Where drawings were not available we estimated the internal arrangements and room uses based on our external inspection

4.2 Where we have had to estimate the internal arrangements and room uses, as noted above, this has will not affect the results for VSC or APSH because the reference point is at the centre of the

window being tested and windows have been accurately drawn from the survey information. It is relevant to the daylight distribution assessment, but in the absence of suitable plans, estimation is a conventional approach.

## 5 INTERPRETATION OF RESULTS

5.1 The BRE report sets targets for adequacy in terms of daylight and sunlight and overshadowing. It also describes the levels at which any reduction would be noticeable.

5.2 A habitable room may be adversely affected if any part of a new building measured in a vertical section perpendicular to the window wall subtends an angle of 25° taken from the centre of the window or a point at the centre of a window opening receives less than 27% VSC; and there is a reduction greater than 20% of its former value.

5.3 Where the ADF is assessed the room may be adversely affected if a kitchen receives less than 2% ADF, a living room receives less than 1.5% ADF or a bedroom receives less than 1% ADF

5.4 It should be noted in respect of kitchens that most Local Authorities recognise small kitchens as non-habitable and therefore do not require to be assessed.

5.5 For sunlight APSH assessment, a living room may be adversely affected if a point at the centre of an existing window receives less than 25% of the total APSH of which at least 5% should be available during the winter months (21 September to 21 March) and there will be a reduction greater than 20% of its former value during either period.

5.6 It is recommended that at least half of the area of the amenity space should be able to benefit from at least 2 hours of sunlight on 21<sup>st</sup> March. This applies to both new gardens and amenity spaces and to existing ones which are affected by new developments. If an existing garden or outdoor space is already heavily obstructed then any further loss of sunlight should be kept to a minimum. If as a result of new development, the area which can receive two hours sunlight on 21 March is reduced to less than 0.8 times its former size, this further loss is significant.

5.7 There is no published research into how the levels of noticeability might be categorised but for the purposes of this report the following has been adopted:

### 5.7.1 VSC Results

Pass/ Unaffected =	Meets BRE target value or is unaffected by the proposals
Negligible =	The VSC will be reduced between 20% and 30%.
Noticeable 1 =	The VSC will be reduced between 30% and 40%.
Noticeable 2 =	The VSC will be reduced between 40% and 50%.
Noticeable 3 =	The VSC will be reduced by greater than 50%.

### 5.7.2 ADF Results

Pass =	Meets or exceeds the BRE target value
Negligible =	Falls below the BRE guidance by 20% or less
Noticeable 1 =	Falls below the BRE guidance between 20% and 40%
Noticeable 2 =	Falls below the BRE guidance between 40% and 60%

Noticeable 3 = Falls below the BRE guidance by more than 60%

## 5.7.3 Daylight Distribution Results

Pass = At least 80% of the proposed room can receive direct daylight or the existing value will be reduced by no more than 20%.

Negligible = Between 64% and 79% of the room will be able to receive direct daylight or the existing value will be reduced by no more than 30%.

Noticeable 1 = Between 48% and 63% of the room will be able to receive direct daylight or the existing value will be reduced by no more than 40%

Noticeable 2 = Between 32% and 47% of the room will be able to receive direct daylight or the existing value will be reduced by no more than 50%

Noticeable 3 = Less than 31% of the room will be able to receive direct daylight or the existing value will be reduced by more than 50%

## 5.7.4 APSH Sunlight Results

Pass = At least 25% of annual probable sunlight hours achieved or existing being reduced by no more than 20%.

Negligible = Existing reduced by no more than 30% or proposed at least 20% APSH

Noticeable 1 = Existing reduced by no more than 40% or proposed at least 15% APSH

Noticeable 2 = Existing reduced by no more than 50% or proposed at least 10% APSH

Noticeable 3 = Existing reduced by more than 50% or proposed less than 10% APSH

## 6 SITE VISIT

6.1.1 We visited the site on the 13<sup>th</sup> October 2016 and took the photographs appended to this report.

6.1.2 The existing site currently consists of single-storey terraces of residential units known as Florine and Racine. The area of site furthest east is currently single-storey garages.

6.1.3 To the west of the site there is a fifteen storey residential building known as Lakanal House, with a five storey residential building known as Lakanal New Build to the west of the block known as Florine.

6.1.4 To the north of the site there are terraced houses which are part two-storey and part three-storey. These are known as 34-90 Dalwood Street.

6.1.5 To the east of the block Florine there is a fifteen storey residential building known as Marie Curie.

6.1.6 To the east of the single storey garages are two and three storey buildings known as number 296 and 298 Southampton Way.

6.1.7 To the east of the block Racine there is a seven storey residential building known as Colbert.

6.1.8 To the south of the block Racine there are buildings associated with Camberwell College. The buildings closest to the site boundary are the Studio and a Student Accommodation block.

6.1.9

Site Plan

## 7 ASSESSMENT OF EXISTING PROPERTIES

### 7.1 Daylight

7.1.1 We have assessed impacts on existing habitable rooms in the adjacent surrounding properties. Our detailed results are appended and the tables below show the results for VSC on individual windows. We have then assessed the Daylight Distribution using the No-Sky Line.

7.1.2

VSC	Pass	VSC reduction %		
		Negligible	Noticeable	
		20 – 30 %	30 – 40 %	40 % +
Colbert	128	0	0	0
296 Southampton Way	17	7	7	1
298 Southampton Way	4	2	0	0
Marie Curie	363	27	35	64
Lakanal House	247	1	1	0
Lakanal New Build	26	0	0	0
34-90 Dalwood Street	44	32	18	0
Camberwell College Student Accommodation	80	1	0	0
Camberwell College Studio	17	1	5	0
Total	926	71	66	65

7.1.3 The majority of the surrounding windows tested will either continue to meet the guidance, be unaffected or be negligibly affected by the proposal. It is possible that some of the windows tested may serve non-habitable rooms and in this case could be discounted.

7.1.4 Our analysis indicates that Marie Curie will have the most noticeably affected windows, this is largely due to the recessed arrangement of the windows. This is limiting the daylight availability in the existing scenario, therefore any development would cause a noticeable result in terms of VSC. Whilst these windows will experience a reduction in VSC, the Daylight Distribution results confirm that all of the rooms to this property will continue to receive daylight to 80% or greater of the floor area apart from 3 rooms which will be within a negligible distance of the recommendations.

- 7.1.5 With regards to 34-90 Dalwood Street, the majority of windows will meet the recommendations or will be within a negligible distance of the recommendations. If we look at the retained values of the windows beyond negligible, they will receive in excess of 19% VSC. The BRE guide states in Appendix F – Setting Alternative Target Values that in urban locations, obstruction angles between residential properties are around 40 degrees which would equate to a VSC value of 18%. Therefore, the retained results of this property are values expected in dense urban areas such as this.

7.1.6 In the below table we summarise the results for Daylight Distribution.

7.1.7

Daylight Distribution (No-Sky Line)	Pass	Daylight Distribution reduction %		
		Negligible	Noticeable	
		20 – 30 %	30 – 40 %	40 % +
Colbert	68	0	0	0
296 Southampton Way	17	2	3	9
298 Southampton Way	1	1	2	1
Marie Curie	171	3	0	0
Lakanal House	91	0	0	0
Lakanal New Build	12	0	0	0
34-90 Dalwood Street	50	15	13	12
Camberwell College Student Accommodation	54	0	0	0
Camberwell College Studio	13	0	0	0
<b>Total</b>	<b>477</b>	<b>21</b>	<b>18</b>	<b>22</b>

7.1.8 The results show that the vast majority of rooms will meet the BRE recommendations for DD with 89% of rooms analysed meeting the recommendation and with 7 rooms being within a negligible distance of the recommendations.

## 7.2 Sunlight

7.2.1 The test we have carried out to assess the impact on neighbouring sunlight is the Annual Probable Sunlight Hours (APSH). We have provided summary results for both annual and winter calculations.

7.2.2

APSH – Annual & Winter	Pass	APSH reduction %		
		Negligible	Noticeable	
		20 – 30 %	30 – 40 %	40 % +
Colbert	68	0	0	0
296 Southampton Way	27	0	0	4
298 Southampton Way	5	0	0	0
Marie Curie	86	2	1	0
Lakanal New Build	8	0	0	0
34-90 Dalwood Street	88	1	1	0
Camberwell College Student Accommodation	9	0	0	0
Camberwell College Studio	1	0	0	0
Total	285	3	2	4

7.2.3 The table above demonstrates that the vast majority of the surrounding rooms will be unaffected by the proposal in terms of sunlight. Please note that we have not tested windows that face within 90 degrees of due north.

## 7.3 Sunlight (Overshadowing) to Existing Amenity Areas

7.3.1 The BRE recommend that at least half of the amenity spaces should receive at least two hours of sunlight on 21<sup>st</sup> March. As can be seen from the appended overshadowing diagrams the majority of surrounding areas will receive at least two hours of sunlight, either existing or proposed, this is in accordance with the BRE guidance.

## 8 ASSESSMENT OF PROPOSED PROPERTIES

### 8.1 Daylight

8.1.1 We have assessed the proposed habitable rooms for ADF and Daylight Distribution. We summarise this below and our detailed results are appended.

8.1.2

Average Daylight Factor (ADF)	Pass	Daylight Levels			
		Negligible	Noticeable		
		Less than 20% below	21% to 40% below	41% to 60% below	Greater than 60% below
Proposed Garage Site	71	6	0	0	6
Proposed Racine East	47	4	4	1	11
Proposed Racine West	32	3	4	0	6
Proposed Florian	96	7	9	0	8
Total	246	20	17	1	31

8.1.3 The majority of the proposed rooms will meet or exceed the BRE recommendation for ADF. This is considered to be a good result for a large development and particularly in an urban area. Those that fall below the target in some instances are small kitchens that could potentially be discounted as they can be considered as non-habitable rooms.

8.1.4

Daylight Distribution (No-Sky Line)	Pass	Daylight Levels			
		Negligible	Noticeable		
		Between 64% and 79%	Between 48% and 63%	Between 32% and 47%	Less than 31%
Proposed Garage Site	62	10	5	0	6
Proposed Racine East	55	9	2	1	0
Proposed Racine West	30	6	1	2	6
Proposed Florian	120	0	0	0	0
Total	267	25	8	3	12

8.1.5 The majority of rooms will achieve the recommended level for daylight distribution. This is a good result and demonstrates that 84% of the habitable rooms will enjoy good levels of daylight.

## 8.2 Sunlight

### 8.2.1

APSH	Pass	Sunlight Levels			
		Negligible			
		Between 20% and 24%	Between 15% and 19%	Between 10% and 14%	Less than 10%
Proposed Garage Site	41	0	0	1	4
Proposed Racine East	35	1	0	0	0
Proposed Racine West	24	0	0	0	0
Proposed Florian	14	6	8	2	5
Total	114	7	8	3	9

### 8.2.2

We have assessed all of the windows that face within 90 degrees of due south and the majority will meet the BRE guidance for APSH. In an urban environment the BRE recognise that achieving the guidance levels for sunlight is rarely possible. In this case the results demonstrate that with careful planning it is often possible to achieve good levels.

## 9 SUMMARY AND CONCLUSION

### 9.1 Existing Buildings

9.1.1 The majority of windows in the existing surrounding properties will meet the BRE guidance, be unaffected or negligibly affected in terms of VSC and DD. All windows will be unaffected by the proposal in terms of APSH.

### 9.2 Proposed Buildings

9.2.1 The majority of the habitable rooms within the proposed development will meet the BRE guidance levels for ADF and DD. The majority of those with windows facing within 90 degrees of due south will meet the guidance for APSH.

9.2.2 The BRE recommend that at least half of the amenity spaces should receive at least two hours of sunlight on 21<sup>st</sup> March. As can be seen from the appended overshadowing diagrams the majority of surrounding areas will receive at least two hours of sunlight, either existing or proposed, this is in accordance with the BRE guidance.

9.3 Having due consideration for the nature of urban development it is encouraging to note that this scheme causes the minimum impact on existing surrounding dwellings whilst achieving acceptable results within the proposed development.

**QUALIFICATIONS AND EXPERIENCE**

# Report on Daylight and Sunlight

## 1 Qualifications And Experience

- 1.1 This report has been prepared by Peter Spence, an Associate within calfordseaden LLP. Peter is a specialist in the area of practice known as Neighbourly Matters, having practiced in this discipline since 2005.
- 1.2 Calfordseaden's daylighting studies are undertaken using specialist computer software, specifically written for the purposes of carrying out the tests described in BR 209.
