

# Ecology and Trees Checklist

This checklist is required for ALL applicable planning applications, please see [Planning Application Requirements](#). Understanding the ecology on and near a site and taking action can avoid delays in planning, create a better quality scheme and avoid criminal prosecution.

Tick all features present and those that COULD be affected by any aspect of the proposal, including:

- development above and below ground, including matters such as the connection of utilities
- large vehicles accessing the site, such as cranes or delivery lorries
- materials storage and where building works (e.g. concrete mixing) would take place
