## Operational Compliance

**NOT IDENTIFIED** | [SEE PAGE 1](#)

Operations at the Site are unlikely to require a permit or present a risk.

[CLICK HERE](#)

## Natural and Mining Related Hazards

**NOT IDENTIFIED** | [SEE PAGE 5](#)

We have not identified coal, ground stability or radon issues.

## Contaminated Land

**PASSED**

### Liability Assessment

Within the scope of this assessment no Liabilities have been identified. No further action is required.

What is the overall risk of contaminants from on Site activities?

**LOW**

What is the risk of contaminants from off-site activities impacting the Site?

**LOW TO MODERATE**

What is the environmental sensitivity (pathways and receptors) rating?

**HIGH**

### Argyll's Recommendations

**No Action Required**

## Operational Compliance

### Argyll's Comment

The Site does not appear to be engaged in activities that require permitting.

## Flood Risk

**PASSED**

### Consultant's Comment

The Site is not considered to be at significant risk of flooding. However, it would be prudent to consider our recommendations below.

Would a Flood Risk Assessment be required if development is proposed?	<b>NO</b>
What is the risk of flooding in an undefended scenario or assuming defences fail?	<b>LOW TO MODERATE</b>
Are there existing flood defences within 500m of the Site?	<b>YES</b>
What is the risk of flooding when these defences are operational?	<b>LOW TO MODERATE</b>

## Insurance

The flood risk identified is unlikely to affect obtaining buildings and contents insurance at standard terms.

### Recommendations

No action required - standard enquiries only

#### Standard Enquiries

- Ask the seller whether flooding has occurred in the area before. If it has, please contact us for advice.
- Establish the availability of buildings and contents insurance before exchanging contracts.

# Report Scope

Report Prepared on: **land at 241 , Stowmarket Road, Great Blakenham , ip6 0ly**  
Current Use: **Assumed Residential Garden**  
Proposed Use: **Assumed Residential Garden**  
Transaction Type: **Assumed purchase**  
Site Area (m<sup>2</sup>): **494.29**  
National Grid Reference: **611440 251470**

# Contaminated Land Consultant Commentary

## On-site Sources

**LOW**

A review of historical maps show the Site remained undeveloped until since the earliest available 1884 map edition.

## Off-site Sources

**LOW TO MODERATE**

A review of historical maps dating from 1884 show one potentially contaminative use within 100m of the Site a malting farm later a recycling site 80m east (c.1884-2021).

We have identified the following recorded landfills/permits in proximity to the Site:

- Modified Inert & excavation Waste treatment operated by J T Few Plant Hire Limited 174m east.

## Pathways and Receptors

**HIGH**

The general area appears to be in residential and agricultural use, with residential gardens located on Site.

The superficial and bedrock hydrogeology underlying the Site are classified as a Secondary A Aquifer and a Principal Aquifer, respectively.

The Site lies within a Source Protection Zone III.

There are 15 abstraction licences located within 500m, the closest being an agricultural abstraction 292m east.

There are no surface water features within 100m.

Finally, no designated eco-receptors were identified within a 500m radius of the Site.

## Additional Sources of Information

No additional sources of information have been used.

# Natural and Mining Related Hazards

**Natural and Mining Related Hazards:** This section contains information on natural and mining related hazards which may affect the Site. These include subsidence, radon and mining. Hazards that may need further investigation are detailed here. This report is neither a guarantee of the physical condition of the subject Site nor a substitute for any physical investigation or inspection.

## Ground Stability Considerations

Risk	Argyll's Summary	Suggested Action
Former Mining	Our search indicates that the Site is not within a Coalfield Consultation Area.	As such, no action is required.
Coal Mining Subsidence Damage Claims	Our search indicates that the Site is not within an area where Coal Mining Subsidence Damage Claims have been recorded.	As such, no action is required.

## Radon

No Risk Identified.

# Flood Risk

## Consultant Commentary

### Flood Analysis

Would a Flood Risk Assessment be required if development is proposed?	<b>NO</b>
What is the risk of flooding in an undefended scenario or assuming defences fail?	<b>LOW TO MODERATE</b>
Are there existing flood defences within 500m of the Site?	<b>YES</b>
What is the risk of flooding when these defences are operational?	<b>LOW TO MODERATE</b>

\* Other factors influencing flood risk include flood storage areas, historical floods, and proximity to water features.

### Argyll's Comment

River	No commentary required.
Coastal	No commentary required.
Groundwater	No commentary required.
Surface Water	No commentary required.
Other Factors	No commentary required.

# Flood Risk

## Other Considerations

**Flood Risk Considerations:** In this section we highlight issues that may be relevant to your transaction. These issues fall outside of the flood risk analysis above, but still warrant consideration.

### Additional Considerations

Risk	Summary	Suggested Action
Dam and Reservoir Failure <b>NOT IDENTIFIED</b>	This Site is not within an area that would be flooded in the event of a significant infrastructure failure.	Contact Canal and Rivers Trust
Sewer Flooding <b>NOT SEARCHED</b>	In times of extreme rainfall events sewers can overflow and cause local flooding. At Risk Registers are maintained by water and sewerage companies in England and Wales. These registers are not always complete so asking the seller is equally important.	Review Con29DW and send enquiries to the seller.

### Flood Risk Management Options

Flood protection measures can help manage risk, while planning for a flood event is key to minimise impact and disruption. Where a risk has been identified, the best next step is to better understand the flood depths and likely extent. Refining the risk will then inform the right solution. Where property level protection is still required, a surveyor will be best placed to advise on the configuration.

Options	Summary
Resistance	Flood resistance measures are physical barriers designed to keep water out of the property and can either be mountable or passive. They include flood doors or guards, non return valves on plumbing and airbrick covers. If buying products, make sure they are kitemarked.
Resilience	Flood resilience measures are incorporated into building design to minimise damage. Once flood water subsides a resilient design avoids a major drying out spell or gutting.
Business Continuity Plan	A business continuity plan is a strategic plan of action to implement in an emergency (i.e. flood event). This plan ensures a business can continue to operate during emergency situations and reduces the risk of avoidable losses.
Flood Evacuation Plan	A flood evacuation plan sets out clear steps to ensure the safe evacuation of staff during a flood. It will form part of the Business Continuity Plan.

# Contaminated Land

## Data Section

**Contaminated Land Data:** This section details the data used as part of our Contaminated Land Risk analysis. Each key dataset is mapped with the detail outlined beneath. We only show section headers beyond the tabular summary where we have found data to report. The relevant data has been reviewed by the report writer, supplemented by a review of historical mapping.

# contents

Tabular Summary	This section gives an overview of the data found at the Site and in the surrounding area. We present the data in three buffer zones, extending to a maximum of 500m. The search distances vary based on the scale of the activity and regulatory guidance. We display the number of records found in each database under the relevant heading. Where we have not searched a database, we will display the abbreviation N/A instead.
Authorised Industrial Processes	This section shows current and licensed activities relevant to contaminated land and environmental controls from a range of regulatory bodies. The search distances vary based on the scale of the activity.
Incidents and Enforcements	This section shows pollution incidents, licence enforcements and prosecutions. It also includes Contaminated Land Register Entries and Notices.
Landfill and Waste sites	This section presents detailed information on waste and landfill sites for the Site and surrounding area.
Current Land Use	This section shows contemporary trade directories and fuel stations. This information is indicative of operations at the Site and surrounding area, and may also relate to inactive or former land uses.
Historical Land Use	This section presents selected information on historical land use for the Site and surrounding area. The data shows historical land use information collected from 1:10,000 scale mapping, and for tanks and energy facilities 1:2,500 scale mapping. This includes polygon and point based land uses digitised by Landmark.
Groundwater Vulnerability	This section presents information relating to the aquifer designations beneath the Site. The aquifer designation of the Superficial and Bedrock geology are both mapped, followed by the detail. These aquifer designations are followed by information on the local geology. This information is considered in our Pathways and Receptors section.
Environmental Sensitivity	This section presents designated eco-receptors and sensitive area designations at the Site and in the surrounding area. This information is considered in our Pathways and Receptors section.
Natural and Mining Related Hazards	This section contains information on natural and mining related hazards, which may affect the Site. These include subsidence, radon and mining.

# Flood Risk

## Data Section

**Flood Risk Data:** This section details the data used as part of our Flood Risk analysis. Each key source of flooding has the data mapped with the detail outlined beneath. All relevant data in this section has been reviewed by the report writer and taken into account in the overall analysis. As a result, the individual risks in the data below may vary from our overall opinion.

# contents

<b>Tabular Summary</b>	This section gives an overview of the data at the Site and in the surrounding area. We present the data in three buffer zones, extending to a maximum of 500m. Where we have not been able to search a database, we will display the abbreviation N/A instead.
<b>River and Coastal Flooding</b>	The data used to form our river and coastal flood risk analysis includes: <ul style="list-style-type: none"><li>• <b>Flood Zones:</b> Created for land-use planning, Flood Zones map the likelihood of flooding assuming no defences are present, fail or are over-topped. This data is presented as FZ1, FZ2 or FZ3.</li><li>• <b>Risk of Flooding from Rivers and Seas (RoFRS):</b> Provides an indication of flood risk taking into account the presence of defences and the level of protection they offer.</li><li>• <b>Flood Defences:</b> Recorded by the regulatory body, and includes defence type and standard of protection.</li><li>• <b>Areas Benefiting from Flood Defences:</b> Areas defined as having protection of at least 1 in 100 for river and 1 in 200 for coastal.</li><li>• <b>Flood Storage Areas:</b> Areas that store floodwater during flood events.</li></ul>
<b>Surface Water Flooding</b>	We present the risk of surface water flooding in three separate return periods: <ul style="list-style-type: none"><li>• 1:75</li><li>• 1:200</li><li>• 1:1000</li></ul> Each map will show the likely flood depth bandings within each of these return periods.
<b>Groundwater Flooding</b>	The data takes into account the two key mechanisms of groundwater flooding; clearwater and permeable superficial deposits.
<b>Other Factors</b>	This section accounts for risk that is not tied to modelled data. It includes historical floods, proximity to water features and elevation above both of these features.

# Flood Risk: Tabular Summary

## Flooding

<b>River and Coastal Flooding</b>	<b>On-site</b>	<b>1-250m</b>	<b>251-500m</b>

# Site Solutions Combined

## About this report

### Site Solutions Combined Limitations

**Site Solutions** Combined reports help you and your clients make informed property decisions. Our reports are 'desktop' assessments, written and quality checked by our team of expert consultants. We carry out the work in our Brighton office using data, maps and our expertise. We do not carry out a physical inspection of the property nor do we contact any regulator. This means that we cannot guarantee that we will have identified all issues of concern.

In the Data Section of the report we list the data sources that we have used. Most of these data sets come from third party sources such as the Environment Agency. We cannot guarantee the accuracy of this data and are not responsible for any inaccuracies in third party data.

All **Site Solutions** reports are covered by our terms and conditions, a copy of which is available on our website, [www.argyllenvironmental.com](http://www.argyllenvironmental.com). If you need any further information please contact us on 0330 036 6115.

### Contaminated Land Risk Analysis Methodology

For this section of the report we assess the condition of the land. We see whether the land could be 'Contaminated Land' under the relevant legislation. This section of the report meets the requirements for an independent site report. This is the recommendation of the Law Society Practice Note on Contaminated Land.

The main legislation is Part 2A of the Environmental Protection Act 1990. We also assess whether similar requirements could arise under the Water Resources Act 1991. The Contaminated Land legislation asks whether a 'plausible contaminant-pathway-receptor relationship' exists. If we identify a relationship, then our consultants will assess the potential significance. We define Liabilities as the potential for remedial works under Part 2A of the Environmental Protection Act 1990 and/or the Water Resources Act 1991.

If the Site is to have a change of use, then we also consider relevant requirements under the Planning Regime. It may be that the level of contamination will only become an issue if the Site is to be redeveloped. An example of this is when former industrial land is redeveloped for housing. If the Site is to be redeveloped then it could also include remedial works required under the planning regime. These remedial works may be the responsibility of the Site owner or occupier.

We will issue one of the following Liability statements, in line with Defra's recommended four stage test.

Assessment	Liability Statement	Defra Category
PASSED 	Within the scope of this assessment no Liabilities have been identified. No further action is required.	3 or 4
PASSED – PRUDENT ACTION 	Within the scope of this assessment no Liabilities have been identified. However, your attention is drawn to the prudent action suggested below.	3 or 4
FURTHER ACTION 	We have identified potential soil and/or groundwater liabilities. To quantify these we recommend you undertake the action outlined below.	Potentially 1 or 2

## Flood Risk Analysis Methodology

For this section of the report, we assess the risk of flooding at the Site. A Consultant will analyse the data within the report, and take into account factors such as source of flooding, extent, and which part of the Site is at risk (is it operationally sensitive).

Three key areas are addressed:

- the overall risk of flooding (taking into account defences)
- how flood risk affects the availability of insurance
- how flood risk affects the potential to redevelop

We report the overall risk in a summary statement, with the three outcomes listed below:

Assessment	Risk Statement
PASSED 	<p><b>Negligible, Low &amp; Low-Moderate Risk:</b> The Site is not considered to be at significant risk of flooding. No further action is deemed necessary.</p> <p><b>Recommendations:</b> Some simple advice may be provided.</p> <p><b>Insurability:</b> Insurance should be readily available.</p>
PASSED – PRUDENT ACTION 	<p><b>Moderate Risk:</b> Data indicates some risk exists to the Site and its occupants. However, this is expected to be associated with an ‘extreme’ event.</p> <p><b>Recommendations:</b> Practical advice will be provided. This may be to obtain further information or to write a flood preparation plan.</p> <p><b>Insurance:</b> In most cases insurance should be readily available.</p>
FURTHER ACTION 	<p><b>Moderate to High and High:</b> This report reveals a significant risk of flooding which should be addressed.</p> <p><b>Recommendations:</b> Further assessment is recommended to clarify the risk of flooding at the Site. This will inform whether flood protection measures should be installed.</p> <p><b>Insurance:</b> Insurance may not be available without a higher premium or excess.</p>

The flood risk gauges provide an analysis of each of the four main types of flooding: river, coastal, groundwater and surface water. A fifth gauge provides analysis of ‘other factors’. This includes historical floods, proximity to water features and elevation above both of these features. The purpose of this gauge is to account for risk that is not tied to modelled data.

Environment Agency defences protect large areas of England and Wales from river and coastal flooding. Our analysis of flood risk from these sources takes defences into account. Where defences are present we will report both defended and undefended risk to present the full risk profile. However, our overall assessment and recommendations will be based on the defended risk.

In Scotland, we do not have access to data from the Scottish Environmental Protection Agency (SEPA). As a result, we are unable to take into account defences. Consequently, in Scotland our assessment is always based on the undefended risk.

An Argyll Consultant will write Site-specific commentary to summarise the risk. The purpose of this is to explain the drivers of the risk, and where possible, the extent and impact. This will be a non-technical account, explaining our assessment in simple terms. Our Consultants generate the risk assessment using several sources. This means the gauges in the front of the report will supersede any risk reported in the data section. We also consider the implications of flood risk under the National Planning Policy Framework (NPPF). We always provide a view on whether a Flood Risk Assessment would be required if development is proposed. Where the client lets us know that the Site is to be redeveloped, we provide recommendations on the most appropriate next step.

# Useful Contacts

Please see below the contact details of the suppliers referred to within this report. For all queries please contact:

## Important Consumer Protection Information

This search has been produced by Argyll Environmental Ltd, 1<sup>st</sup> Floor, 98 - 99 Queens Road, Brighton, BN1 3XF.

Tel: 03300 366 115

Email: [orders@argyllenviro.com](mailto:orders@argyllenviro.com)

Argyll adheres to the Conveyancing Information Executive (CIE) standards.

### The Standards:

- Conveyancing Information Executive Members shall act in a professional and honest manner at all times in line with the Conveyancing Information Executive Standards and carry out the delivery of the Search with integrity and due care and skill.
- Compliance with the Conveyancing Information Executive Standards will be a condition within the Conveyancing Information Executive Member's Terms and Conditions.
- Conveyancing Information Executive Members will promote the benefits of and deliver the Search to the agreed standards and in the best interests of the customer and associated parties.
- The standards can be seen here: <http://www.conveyinfoexec.com>

## Complaints

If you have a query or complaint about your search, you should raise it directly with the search firm, and if appropriate ask for any complaint to be considered under their formal internal complaints procedure. If you remain dissatisfied with the firm's final response, after your complaint has been formally considered, or if the firm has exceeded the response timescales, you may refer your complaint for consideration under The Property Ombudsman scheme (TPOs). The Ombudsman can award up to £5,000 to you if the Ombudsman finds that you have suffered actual financial loss and/or aggravation, distress or inconvenience as a result of your search provider failing to keep to the Standards.

Please note that all queries or complaints regarding your search should be directed to your search provider in the first instance, not to TPO.

### TPOs Contact Details:

The Property Ombudsman scheme  
Milford House  
43-55 Milford Street  
Salisbury  
Wiltshire SP1 2BP

Tel: 01722 333306

Fax: 01722 332296

Website: [www.tpos.co.uk](http://www.tpos.co.uk)

Email: [admin@tpos.co.uk](mailto:admin@tpos.co.uk)

## Argyll Environmental Complaints Procedure

If you want to make a complaint to Argyll Environmental, we will:

- Acknowledge it within 5 working days of receipt
- Normally deal with it fully and provide a final response, in writing, within 20 working days of receipt
- Keep you informed by letter, telephone or e-mail, as you prefer, if we need more time
- Provide a final response, in writing, at the latest within 40 working days of receipt
- Liaise, at your request, with anyone acting formally on your behalf

## Complaints should be sent to:

Legal Director  
Argyll Environmental Ltd  
1<sup>st</sup> Floor  
98 - 99 Queens Road  
Brighton  
BN1 3XF

Tel: 03300 366 115

Email: [orders@argyllenviro.com](mailto:orders@argyllenviro.com)

If you are not satisfied with our final response, or if we exceed the response timescales, you may refer the complaint to The Property Ombudsman scheme (TPOs):

Tel: 01722 333306,

Email: [admin@tpos.co.uk](mailto:admin@tpos.co.uk)

We will co-operate fully with the Ombudsman during an investigation and comply with his final decision.
