

External Lighting Design Scheme

Barn conversion Hornby

External lighting to the building will be installed under above external doorways and will ensure external access areas are illuminated to provide a safe access for all users and avoid/minimise light spill and lessen impact on nocturnal wildlife. The external lighting will:

- Use LED luminaries.
- Have warm white spectrum <2700° Kelvin
- Be of a downlighter design with hood/shield.
- Not shine towards roof structure, boundary vegetation or nesting boxes
- Have movement activation with short duration.
- Have a manual override switch.

Example of typical hooded downlighter to be used.
