T2 – Beech.  
T4 – Beech.  
T5 – Beech.  
T8 – Beech

To carry out an overall crown reduction of upto 3m to regulate the size and shape due to their close proximity to each other as well as their close proximity to adjacent buildings. This will also reduce the risk of any snap-outs / wind thrown branches causing damage to the buildings, as has happened in the past.

To carry out a crown clean / deadwood and visually examine the trees for any defects. This procedure is to prolong the health and structure of the trees.

T6 – Lime.

To carry out a pollard to 8-10m to regulate the growth, size and shape due to its close proximity to the other tree species and the adjacent buildings. This may also create some nesting habitat for native species of bird.

If you have any questions about the work you require please don't hesitate to call.

Kind Regards

Lloyd Southon.
