Description of Client Brief
Demolition of annex connection hallway to be replaced with a new infill construction, matching the character and volume of the remaining annex building.

Material Statement
During the demolition process a high level of care will be taken to retain and store all facade sandstone and roof slate to be utilised within the proposed infill.
Elements of the sandstone will be used within the internal wall of the annex building to maintain its original identity as a separate entity.
Where additional sandstone and slate is required, special care will be taken to ensure a coherent colour match is achieved.
All new windows within the works are proposed as Black aluminium windows to match the existing in appearance while providing increased thermal properties.
