Addendum Verification Report

Trinity Lane, Chipping Sodbury

23rd July 2021

Contaminated Land, Brownfield & Environmental Contracting

Table of Contents

1.0	Introduction.....	1
2.0	Comments From SGC & Outstanding Verification Requirements	2
	2.1 Comments from SGC & Outstanding.....	2

Appendices

Appendix A	Duty of Care & Consignment Notes
Appendix B	Photographs & Location Drawing

1.0 Introduction

- 1.1 VertaseFLI Limited (VertaseFLI) has previously produced a Verification Report dated 13th August 2020 for remediation works undertaken on land at Trinity Lane, Chipping Sodbury, South Gloucestershire BS37 6BX (site) on behalf of Cotswold Homes (client).
- 1.2 The aforementioned verification report confirmed the necessity for further verification on completion of the wider construction works.
- 1.3 Further, comments were received from South Gloucestershire Council (SGC) on the verification report.
- 1.4 This addendum report covers the additional verification report and addresses the comments from SGC.

2.0 Comments From SGC & Outstanding Verification Requirements

2.1 Comments from SGC & Outstanding

2.1.1 For ease of reading, the SGC comments are reproduced below (italics) with the corresponding responses which also covers all outstanding verification requirements.

2.1.2 *The report states that all made ground will be removed from houses and garden areas but where made ground is encountered at depths greater than this a 600mm pathway break is proposed. Clarity is sought on if any made ground is to remain in place in the residential land use areas, what the exact composition of the pathway break will be, and what is the justification for that design i.e. is the intent to solely have a thickness of imported clean material or will it include the provision of a no-dig or marker layer in areas where made ground is to remain at a depth below 600mm. Likewise clarity is sought for the pathway break proposed in the POS. It is noted that a separate letter report is anticipated to be produced.*

We can confirm that due to the shallow depth of the made ground encountered and that there was a surplus of construction arisings, all made ground was removed from the whole site negating the need for a pathway break.

2.1.3 *Prior to discharge of this condition the verification report must be finalised and must include the following:*

(i) *Copies of Duty of Care waste transfer notes for exported contaminated soils*

Please find copies of duty of care waste transfer notes and 1 no. hazardous waste consignment note enclosed in Appendix A.

(ii) *Test certificates, photographs and location plan for the additional site investigations*

The only additional site investigations required were to the old pond. These were reported in the original verification report.

(iii) *Photographic evidence that the pathway break has been placed in accordance with this RMS*

As stated previously, as all made ground was removed, no pathway break was necessary. However, the NHBC wanted to see confirmation that appropriate subsoil and topsoil was

placed in garden areas. To satisfy this requirement, 1 m² trial pits were excavated and the photographs and location are enclosed in Appendix B.

(iv) *Sample locations and verification results for the underlying geology*

Verification of the underlying geology for TP01 and TP03 (areas with the worse contaminated MG) were reported in the original verification report. Verification of the underlying geology beneath an additional hotspot was also reported in the original verification report.

Due to an oversight, verification of the underlying geology was not taken where MG was fully removed from the remainder of the site although photographic evidence is provided in Appendix B. The absence of this testing data is not considered an issue because:

- We have photographic evidence,
- Some underlying geology verification was undertaken and beneath areas where MG was previously present containing the highest levels of the most mobile contamination. These confirmed there was no cross contamination of the underlying geology at these locations, and
- Whilst not necessary, subsoil and topsoil has been placed during construction in the most sensitive areas namely, POS areas and gardens (the underlying natural geology contained high proportions of large rock and was deemed unsuitable as a growing medium).

(v) *Details of any additional contamination and action*

An additional hotspot was discovered during the works and this was reported in the original verification report.

2.1.4 *It is noted in the verification report submitted that a number of these documents are available on request and should be forwarded or included in a revised appendix. All available documentation should be provided for consideration, in particular the Duty of Care notes including all stockpiles removed and all landfilled materials.*

Please find copies of duty of care waste transfer notes and 1 no. hazardous waste consignment note enclosed in Appendix A. Please

note, all notes relate to made ground and not stockpiles. As confirmed in the original verification report, the above ground stockpiles were exported by the previous landowner before our client took possession of the site.
