Nitrogen Budget Calculation

Planning Application Reference No.	20/11276
Site Name:	2A - 4A GOSPORT STREET, LYMINGTON, SO41 9BE
Additional Information:	
Date:	**27 July 2021**

Stage 1 Calculate total Nitrogen in kg per year derived from the development that would exit the Wastewater Treatment Works (WwTW) into Solent catchments after treatment

Step 1 Calculate additional population

Enter the number of units proposed by accommodation type

		Average occupancy	
Evidenced rates should be used for occupancy and seasonality , attach the evidence used.	Room - single (under 8.5sqm visitor or institutional accomodation)	1.0	
	Room - double+ (visitor or institutional accomodation)	2.0	
	Evidenced number of weeks open per annum - default value 52		**52**
	Evidenced occupancy rate (%) - default value 100		**100**
NFDC occupancy values. Do not adjust	Studio or 1-bed home	1.4	
	Two-bed home	2.1	**1**
	Three-bed home	3.0	
	Four+ bed home	3.75	
	Unspecified home (outline applications, Policy HOU1 compliant mix)	2.63	
	Total net population increase generated by the development		**2.10**

Step 2 Calculate wastewater volume generated by the development

Water use in litres per person per day	**110**
Total wastewater volume generated by the development (litres per day)	**231**

Step 3 Confirm receiving WwTW and permit limit

Select the wastewater treatment works the development will connect to	**Pennington**
Wastewater treatment works' permit limit (mg per litre)	**9.5**
Wastewater treatment works' discharge level (mg per litre)	**8.6**

Step 4 Calculate total nitrogen in kg per year discharged by the WwTW

Deduct acceptable Nitrogen loading in wastewater (mg per litre)	**6.6**
Total Nitrogen discharged by WwTW (mg per day)	**1,513.1**
Total Nitrogen discharged by WwTW (kg per day)	**0.0015**
Total Nitrogen discharged by WwTW (kg per year)	**0.6**

Stage 2 Calculate existing (pre-development) nitrogen from current land use of the development site

Step 1 Total area of development site

Enter the total area of the development site (hectares)	**0.01**

Step 2 Identify current land uses of the development site

Enter area currently used for urban development (hectares)	**0.01**
Enter area currently used for open space / greenfield (hectares)	**0.00**
Enter area currently used for woodland (hectares)	**0.00**
Enter area currently used for community food growing / catchment average (hectares)	**0.00**
Enter area currently used for cereals (hectares)	**0.00**
Enter area currently used for dairy (hectares)	**0.00**
Enter area currently used for general cropping (hectares)	**0.00**
Enter area currently used for horticulture (hectares)	**0.00**
Enter area currently used for pig farming (hectares)	**0.00**
Enter area currently used for lowland grazing (hectares)	**0.00**
Enter area currently used for mixed farming (hectares)	**0.00**
Enter area currently used for poultry farming (hectares)	**0.00**
Check to help ensure that sum total of land uses in Step 2 equals site area in Step 1	**0.0**

Step 3 Calculate nitrogen load from current land usage

Total Nitrogen load from current land usage (kg per year)	**0.1**

Nitrogen Budget Calculation

Stage 3 Calculate nitrogen load for the non-built land uses proposed for the development site

Step 1 Identify proposed land uses of the development site

Enter the total urban area to be created (hectares)	0.00
Enter the total designated open space / SANG area to be created (hectares)	0.00
Enter the total nature reserve area to be created (hectares)	0.00
Enter the total woodland area to be created (hectares)	0.00
Enter the total community orchard area to be created (hectares)	0.00
Enter the total community food growing / allotment area to be created (hectares)	0.00
Check to help ensure that sum total of proposed land uses equals site area in Stage 2	0.00

Step 2 Calculate total Nitrogen load from proposed land uses

Total Nitrogen load from future land uses (kg per year)	0.00

Stage 4 Calculate the net change in Nitrogen load from the proposed development

Step 1 Identify Nitrogen load from wastewater (Stage 1)

Nitrogen leaving wastewater treatment works (kg per year)	0.55

Step 2 Calculate net change in Nitrogen load from land use changes

Total Nitrogen load from future land use (kg per year)	-0.14

Step 3 Calculate total Nitrogen budget for the development site

Nitrogen budget for the site (kg per year)	0.41

Step 4 Calculate precautionary buffer if Nitrogen budget exceeds zero

Precautionary 20% Nitrogen buffer (kg per year)	0.08

Total Nitrogen budget for the proposed development (kg per year)	**0.5**

Development will generate additional Nitrogen - Mitigation is required
