Hi there

Just following our conversation last week – I can confirm the rough specs of the dish we usually tend to use are as follows:

**189 x 189 x 125 mm**

If we require a bigger dish for a better signal, the next one up is 40cm. As for the usual dish, please see below for it's appearance. If we get a great signal, we tend to just use a discreet bracket for the installation. If we require more height, we may need to use a 2m pole for example. There will be a single cable running into the property, and we aim to install as discreetly as possible within our requirements:

*Larger dish not required.  
Pole not required.*

Kind regards

Brandon March
