

Statement for replacing windows for 2a Kew Terrace, Glasgow G12 0TD

Following on from the survey carried out at the above address

- There is damage to the windows from poor maintenance, this has decreased the lifespan of the windows
- As per the aims of the Scottish government, the property would greatly benefit from having double glazing and draught proofing installed as to increase the energy efficiency of the property.
- Installing double glazing would also help Glasgow City Council meet its aims of making homes more energy efficient.
- The character of the area remains the same as the windows are manufactured like for like.

Any new windows would be manufactured in a like for like formation to replicate the existing, horn and moulding detail would also be manufactured to existing.

Yours Sincerely,
Iain Ritchie
