CDM REGULATIONS 2015

- The Client will need to employ a principle designer and contractor to offer assistance in the Health & Safety process to co-ordinate Health & Safety issues. Further advice may be found on websites such as CONIAC Industry and HSE, or take advice from a suitably qualified company.
- These drawings together with any surveys such as an asbestos survey etc and records/information that the client has on the building or site such as service locations should be passed to the contractor.
- This brief does not extend to the principle designer role, therefore the principle contractor will be responsible for developing a Health & Safety file during the period of construction and passing this to the client as an "as built" Health & Safety file.
