**Flag Status:** Flagged

For the attention of:- Russell Pilfold Ref:- SDNP/21/04948/DCOND  
Apologies for our error the product that we feel would be best suited for the arena surface is a product made by Day equestrian called Fibremix. This is the most natural colour, it is a silica sand with fibres in it to bind the sand together.  
Many thanks Claire Frampton

## Winning surfaces to suit all disciplines

Fibremix is a non-coated blend of high quality washed silica sand and stabilising fibre. Fibremix is delivered as a complete surface, so it's quicker and easier to lay than sand and fibre mixed in situ.

Fibremix has its fibre mixed right through the full depth of the surface, compared to the top 50-75mm, which is the case for on-site mixes. This gives the surface far superior stability.

Fibremix is a popular, lower-cost alternative to a waxed surface. This surface requires occasional irrigation.

For information on maintenance and installation recommendations please refer to our website.
