

# Universal Lime Plaster

**Limecote** is a highly versatile lime plaster based on a recipe over 600 years old. It can be used on most backgrounds – from thin skims to 3” thick heavy reliefs, applied internally or externally.

- Perfect for skimming over existing plaster
- Use a thick mix of **Limecote** to dub out or thin to spread onto a flat background
- **Limecote** can be used at most thicknesses as a thick, single application, or multiple thin coats

## DIRECTIONS FOR USE:

Fill a mixing tub with 7 litres of clean water.

From the small paper bag, disperse the fibres into the water thoroughly, stirring with a stick.

Gently add **Limecote** mixing with a plasterer’s paddle. If necessary, add more water to reach desired consistency.

Ensure that the background is clean and free from loose and friable material. Lightly damp down, avoiding a film of water on the surface.

Apply **Limecote** onto the background with a trowel or spray.
