Insulated Lime Plaster

FLEXIBLE, BREATHABLE, SUSTAINABLE

Warmcote is an insulated versatile ultra-lightweight lime plaster.

It can be used on its own on solid backgrounds or as a base coat for a Limecote finish.

- Minimal shrinkage, so can be used to deep fill damaged masonry or clay substrates
- A perfect base coat for metal/wooden lath, finish with Limecote
- Heat resistant, ideal for use on fireplaces especially with log burners

DIRECTIONS FOR USE:

Empty a full bucket of water into a large mixing tub (60 litres, or more.)

From the small paper bag, thoroughly disperse the fibres into the water, stirring with a stick.

Gently add **Warmcote**, mixing with a plasterer's paddle. If necessary, add more water to reach desired consistency.

Ensure that the background you're applying to is clean and free from loose and friable material. Lightly damp down, avoiding a film of water on the surface.

Apply **Warmcote** onto the background with a trowel or spray.
