

○ 7.0 SOFT LANDSCAPING

ORNAMENTAL PLANTING

Planting is a key feature throughout the site with different areas of planting providing a key role in how the site functions on a daily basis. An exciting palette of plants has been selected for the landscape design.

Species have been selected to provide year round seasonal interest with structural grasses providing winter interest and flowering herbaceous perennials for spring and summer. The selected planting will be split based on location on site and whether the beds are predominantly facing the sun or the shade.

Flowering plants will be included in the planting scheme which provide added benefits to the local biodiversity and wildlife including birds and insects. The planting will also be low maintenance.
