

Details of 2 bat boxes which will be installed:

Bat boxes will be installed. These will be no less than 3m above ground level and away from any neighbouring ledge to prevent local cats predateding on bats using the boxes.

A minimum of two Schweglar 1FF or similar boxes (Figure 5) will be hung on the trees at a minimum of 3m from ground level and face south/southwesterly. These boxes are known to be used by crevice and void dwelling species.

Details of 2 swift boxes which will be installed:

## Swift Nest Box

- Bird box designed especially for swifts.
- Redesigned in 2016, based on the highly successful Zeist design.
- Ideally placed high up under the eaves on buildings.
- Single compartment nesting area accessed through an oval entrance hole in overhanging front panel.
- Modified in 2017 to a 28mm x 65mm entrance as a result of recent research findings.
- Designed to keep starlings and sparrows from occupying the box.
- Constructed from precision cut FSC softwood panels treated with water based environmentally friendly preservative.
