

Supporting Statement

Placement of an LPG (Propane) gas tank 1410 litres, and underground pipework for gas supply to house, for domestic heating and hot water fuel. LPG replaces Oil heating system.

Tank location is to the side of the front garden, hard standing area has been made for the placement of tank. The tank is screened by the woodland to one side, and the planting of ornamental shrubs and bushes (within the boundaries of the Spinney's plot) is intended to provide natural cover that will prevent the tank from being visible from the public road

Placement of the tank and install of pipework took one day, started and completed on same day (21-09-21) however field below will not allow the same date to be entered for start and completion.

Flogas conducted the work, without advising that planning permission was required. When Flogas surveyed the property for the tank install they advised that this was the only suitable location due to the 3m rule.
