## INFORMATION SOURCES

## 1. INTRODUCTION

An Agricultural Land Classification (ALC)<sup>1,2</sup> has been carried out on 158.5 ha of land located on the west of Thorpe Estate, Tamworth (Drawing ALC/1). The site is centred on OS Grid Ref. 424281, 308931.

Agricultural land is classified into the following grades according to the 1988 guidelines<sup>1</sup> and the 1996 draft guidelines<sup>2</sup>:

| Grade | Description   |
|-------|---|
| 1     | <b>Excellent quality agricultural land</b> with no or very minor limitations to agricultural use.   |
| 2     | <b>Very good quality agricultural land</b> with minor limitations which affect crop yield, cultivation or harvesting.   |
| 3a    | <b>Good quality agricultural land</b> capable of producing moderate to high yields of a narrow range of arable crops or moderate yields of a wider range of crops.            |
| 3b    | <b>Moderate quality agricultural land</b> capable of producing moderate yields of a narrow range of crops or lower yields of a wider range of crops.                          |
| 4     | <b>Poor quality agricultural land</b> with severe limitations which significantly restrict the range of crops and/or level of yields.   |
| 5     | <b>Very poor quality agricultural land</b> with very severe limitations which restrict use to permanent pasture or rough grazing, except for occasional pioneer forage crops. |

The survey was conducted on the 20<sup>th</sup> and 21<sup>st</sup> May 2019 and classifies the land into one or more of the above grades.

On the survey date the site was in a rapeseed oil crop and grass or wheat crop with a number of fields currently recently ploughed.

### Statement of competence

The survey was undertaken by Rebecca Jordan BSc MSc, an Environmental Consultant who is a member of BSSS with 3 years ALC survey experience and has attended the *Agricultural Land Classification: England and Wales Training Event* (November 2018) and the *Introduction to Soil Classification Training Event* (June 2016) organised by BSSS. The report was checked by Dr Robin Davies who has been a member of the BSSS for over 30 years, the IPSS since it was formed in 1991 and has been undertaking ALC surveys for 25 years.

## 2. METHODOLOGY

The classification includes an initial desktop investigation to examine previously mapped soil types and to note the drift and solid geology. This included consultation from:

*Soil Survey of England and Wales 1:250 000<sup>4</sup>*  
*British Geological Survey 1:50 000 solid and drift map<sup>8</sup>*

The field survey consisted of pit excavations to examine soil profiles on a 100 m grid (1 per hectare) using standard soil survey methods<sup>2</sup>. This data was used to map the principal soil types for determining the ALC. The soil removed during augering and pit excavations was examined in accordance with:

*Soil Survey Field Handbook<sup>2</sup>*  
*Describing and Sampling Soil Profiles*  
*Soil Survey of England and Wales, Technical Monograph No. 5, 1976*

*Soil Classification for Soil Survey<sup>9</sup>*  
*Monographs on Soil Survey*  
*Butler, B E (1980) Clarendon Press, Oxford*

Climatological data<sup>3</sup> was used to determine the overriding site limitation and for interaction with soil parameters (Appendix A). The above information was cross referenced with geological surveys<sup>8</sup>, previous soil surveys<sup>10</sup> and the national 1:250 000 series ALC survey<sup>4</sup> relevant for this site to substantiate the findings. The ALC grade was then determined for this site and for the current survey and is detailed in Drawing ALC/1.

Particle size analysis was undertaken on samples collected on the site in accordance with Soil Survey Laboratory Methods<sup>11</sup>.

### 3. BASELINE CONDITIONS

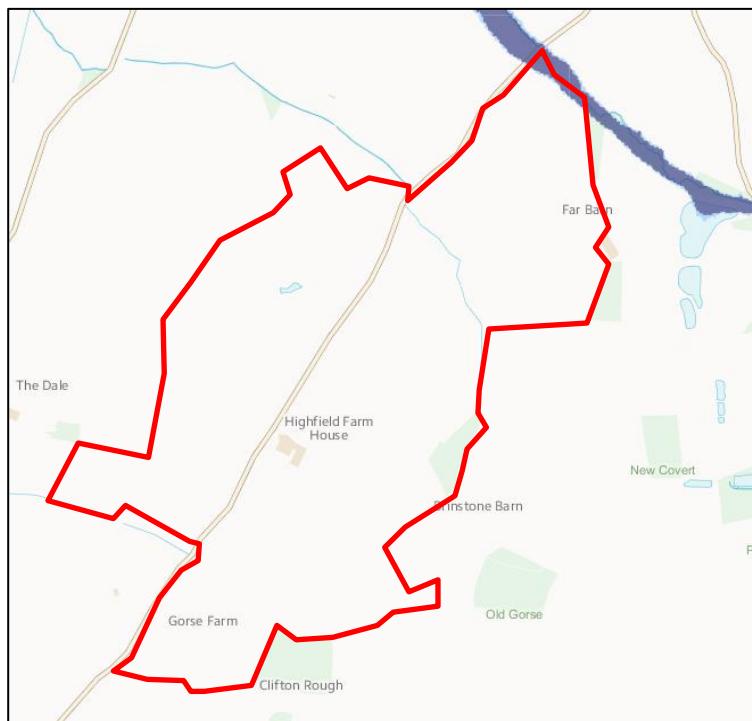

#### 3.1. Climate and flooding

The climatological data (Table 1a) indicates slightly above average temperature, average rainfall and an average number of field capacity days for the region.

| Table 1a<br>Climatological information <sup>4</sup> |                  |        |
|---|------------------|--------|
| Factor  | Units            | Value  |
| Altitude AOD  | m                | 85     |
| Accumulated temperature                             | day°C (Jan-June) | 1377.0 |
| Average Annual Rainfall                             | mm               | 643.7  |
| Field Capacity Days                                 | days             | 139.3  |
| Moisture Deficit Wheat                              | mm               | 105.2  |
| Moisture Deficit Potatoes                           | mm               | 95.7   |

The majority of the site is mapped within a non flood risk area<sup>8</sup>. The north eastern boundary is mapped within a Flood Zone 2 and 3 flood risk area<sup>8</sup>.

Environment Agency Risk of Flooding from Rivers and Sea Map (1:10,000 scale, 2018)

For the purpose of this report, the terms used by the Environment Agency to categorise flood risk have been changed to match terms used by MAFF. This is to allow an agricultural classification grade to be determined for the site based on flood risk. The classifications have been found to correspond as follows:

- Environment Agency Zone 3a High Probability – MAFF Frequent
- Environment Agency Zone 3b Functional Floodplain – MAFF Frequent
- Environment Agency Zone 2 Medium Probability – MAFF Occasional
- Environment Agency Zone 1 Low Probability – MAFF Rare to Very Rare

The total site area affected by the Zone 3 High Probability flooding is approximately 0.3 ha (Table 1b).

**Table 1b. ALC Grade according to flood risk**

**WINTER Mid November to mid March**

| ALC Grade | Frequency  | Duration | Approx. Area affected (m <sup>2</sup> ) |
|-----------|------------|----------|---|
| 1         | rare       | short    |   |
| 2         | rare       | medium   |   |
| 2         | occasional | short    |   |
| 3a        | rare       | long     |   |
| 3a        | occasional | medium   |   |
| 3a        | frequent   | short    |   |
| 3b        | occasional | long     |   |
| 3b        | frequent   | medium   | 3,000.00                                |
| 4         | frequent   | long     |   |

**SUMMER Mid March to mid November**

| ALC Grade | Frequency  | Duration        | Approx. Area affected (m <sup>2</sup> ) |
|-----------|------------|-----------------|---|
| 1         | very rare  | short           | NA                                      |
| 2         | rare       | short           | NA                                      |
| 3a        | very rare  | medium or long  | NA                                      |
| 3a        | rare       | medium          | NA                                      |
| 3a        | occasional | short           | NA                                      |
| 3b        | rare       | long            | NA                                      |
| 3b        | occasional | medium          | NA                                      |
| 4         | occasional | long            | NA                                      |
| 4         | frequent   | short or medium | NA                                      |
| 5         | frequent   | long            | NA                                      |

| MAFF Frequency definitions |                  |
|----------------------------|------------------|
| very rare                  | < 1 in 15 year   |
| rare                       | 1 in 10 -14 year |
| occasional                 | 1 in 3 - 9 year  |
| frequent                   | > 1 in 3 year    |

| Duration definitions |             |
|----------------------|-------------|
| short                | <48 hrs     |
| medium               | 2 to 4 days |
| long                 | > 4 days    |

## 3.2. Soils, geology and topography

### 3.2.1. Soils

The site has previously been mapped as having soils of the *Whimble 3, Salop and Brockhurst 2 Associations*<sup>5, 6</sup>.

This survey identified the site soils to be the same as the previously mapped soils. Three general soil types were noted for the purposes of ALC grading. Some variation in depth occurred across the site.

This study has identified the soils to be:

1. Silty clay loams over silty clay to depth
2. Clay loam over clay with prismatic and massive structure to depth
3. Clay loam over clay with angular blocky structure to depth

### 3.2.2. Geology<sup>9</sup>

#### Superficial Geology

Majority of the site

*None recorded*

North east of the site

**1:50 000 scale superficial deposits description:** Alluvium - Clay, Silt, Sand And Gravel. Superficial Deposits formed up to 2 million years ago in the Quaternary Period. Local environment previously dominated by rivers (U).

North and west of the site

**1:50 000 scale superficial deposits description:** Head - Diamicton. Superficial Deposits formed up to 3 million years ago in the Quaternary Period. Local environment previously dominated by subaerial slopes (U).

South of the site

**1:50 000 scale superficial deposits description:** Glaciofluvial Deposits, Mid Pleistocene - Sand And Gravel. Superficial Deposits formed up to 2 million years ago in the Quaternary Period. Local environment previously dominated by ice age conditions (UGF).

## **Bedrock Geology**

***1:50 000 scale bedrock geology description: Gunthorpe Member - Mudstone. Sedimentary Bedrock formed approximately 237 to 247 million years ago in the Triassic Period. Local environment previously dominated by hot deserts.***

### **3.2.3. Topography**

The site has a slight slope with a gradient of 5° or less and hence gradient will not limit the ALC Grade across the site. Drains and streams present along field boundaries with gradients of 4-7°are classified as non-agricultural for the purposes of this survey.

## 4. FIELDWORK RESULTS

### 4.1. Descriptions of soil types

This study has identified the soils to be:

1. Silty clay loams over silty clay to depth
2. Clay loam over clay with prismatic and massive structure to depth
3. Clay loam over clay with angular blocky structure to depth

A summary of the features of the soil types are listed in Table 2 and locations are shown within Drawing ALC/1.

| Table 2. Soil Type descriptions  |   |  |  |
|--|---|--|--|
| Profile Description  | Soil types  |  |  |
|  | Type 1  | Type 2   | Type 3   |
| Horizon 1<br>(topsoil)   | 0-35 cm<br>Dark yellowish brown (10YR 4/4) slightly stony medium silty clay loam, no mottles; friable weak medium subangular blocky structure.          | 0-35 cm<br>Dark greyish brown (10YR 4/2) slightly stony medium clay loam, no mottles; friable weak fine subangular blocky structure.     | 0-35 cm<br>Dark greyish brown (10YR 4/2) very slightly stony medium clay loam, no mottles; firm weak medium subangular blocky structure. |
| Horizon 2<br>(subsoil 1)   | 35-120 cm<br>Reddish brown (5YR 4/3) slightly to moderately stony silty clay, few fine ochreous mottles; firm moderate coarse angular blocky structure. | 35-100 cm<br>Reddish brown (5YR 4/3) stoneless clay, many medium ochreous and greyish mottles; firm moderate medium prismatic structure. | 35-60 cm<br>Light brownish grey (2.5Y 6/2) stoneless clay, many medium ochreous mottles; firm weak medium angular blocky structure.      |
| Horizon 3<br>(subsoil 2)   |   | 100-120 cm<br>Reddish grey (5YR 5/2) stoneless clay, many medium greyish mottles; firm moderate massive structure.                       | 60-120 cm<br>Reddish brown (5YR 5/4) stoneless clay, many medium greyish mottles; firm moderate coarse angular blocky structure.         |
| Soil types:<br>Type 1 soil – 9, 16-18, 20, 29-32, 39-44, 53-60, 68-77, 80-108, 113-119, 125-132, 134-146, 150, 152-156 and 158<br>Type 2 soil – 1-4, 6-8, 12-15, 25-28, 36-38, 49-52, 64-67, 109-112, 120-124, 133, 147-149, 151, 157 and 159-172<br>Type 3 soil – 5, 10, 11, 19, 21-24, 32a-35, 45-48, 61-63, 78 and 79 |   |  |  |
| Notes: Variations in depth and stoniness of Type 1 topsoil and subsoil were noted across the site.   |   |  |  |

## 4.2. Field study photographs

**Photo 1. Boring location 68– Profile of Soil Type 1**

NB Photographs of auger borings are included for an illustration of horizons, to verify profile depth and provide an indication of colour but are not intended to verify any structure.

## 5. AGRICULTURAL LAND CLASSIFICATION

### 5.1. National 1:250 000 map grading

Grading on the MAFF (1983) 1: 250 000 map<sup>7</sup> indicated the site was mapped as **ALC Grades 2 and 3**.

### 5.2. Current grading

This survey has resulted in an Agricultural Land Classification of the following grades:

| Table 4. ALC gradings and limitations (Drawing ALC/3) |                      |                   |   |
|---|----------------------|-------------------|---|
| Grade   | Area                 |                   | Limitation  |
| 1   |                      |                   |   |
| 2   |                      |                   |   |
| 3a  |                      |                   |   |
| 3b  | 85.7<br>51.2<br>15.5 | 54%<br>32%<br>10% | Type 1 Soils – Wetness Limitation<br>Type 2 Soils – Wetness Limitation<br>Type 3 Soils – Wetness Limitation |
| 4   |                      |                   |   |
| 5   |                      |                   |   |
| Non-agricultural                                      | 6.1                  | 4%                | Road, Highfield Farm House and ponds, drains and streams on field boundaries                                |
| Total   | 158.5 ha             | 100%              |   |

#### **Type 1 soils – Wetness Limitation**

The combination of the topsoil texture (medium silty clay loam), Wetness Class (IV) and the number of Field Capacity Days (139.3) results in **ALC Grade 3b** for Type 1 soils.

#### **Type 2 soils – Wetness Limitation**

The combination of the topsoil texture (medium clay loam), Wetness Class (IV) and the number of Field Capacity Days (139.3) results in **ALC Grade 3b** for Type 2 soils.

#### **Type 3 soils – Wetness Limitation**

The combination of the topsoil texture (medium clay loam), Wetness Class (IV) and the number of Field Capacity Days (139.3) results in **ALC Grade 3b** for Type 3 soils.

**Key:**

## CL - Clay Loam

ZCL - Silty Clay Loam

C - Clay

## ZC - Silty Clay

No - No Mottles

## FFO - Few Fine Ochreous

MMOG - Many Medium Ochreous and Greyish

MMG - Many Medium Greyish

### MMO - Many Medium Ochreous

FrWMSAB - Friable Weak Medium Subangular Blocky

FrWFSAB - Friable Weak Fine Subangular Blocky

FWMSAB - Firm Weak Medium Subangular Blocky

FMCAB - Firm Moderate Coarse Angular Blocky

#### **FMMP - Firm Moderate Medium Prismatic**

FWMAB - Firm Weak Medium Angular Blocky

FMM - Firm Moderate Massive
