

Planning Application – Enclosed, Lockable MUGA Fence

Photo showing proposed location of new 3m high green mesh MUGA boundary fence.

Blue line showing proposed area to extend the 3m to 5.5m ball retention, cantilever fence.

Planning Application – Enclosed, Lockable MUGA Fence

Picture showing current cantilever ball retention fence on far boundary. This will be relocated on the newly erected 3m green mesh fence.

Photo above showing example of proposed Green Mesh fencing.

868 Mesh Panel Fencing is a rigid mesh fencing system designed as a medium security boundary fence but also mainly used as a Ballcourt Boundary Fence.

Planning Application – Enclosed, Lockable MUGA Fence

The mesh panels are constructed from a 6mm single vertical wire sandwiched by two 8mm horizontal wires leaving a 200mm x 50mm aperture.

As an internal dividing fence or as a secure boundary fence 868 mesh panel fencing is supplied in various colours and in heights ranging from 1.2m up to 2.4m. 868 mesh panel fencing can be supplied higher but generally as a ball court fence.
