Applicants: Mr N Shapland

Date: 08 May 2022

Condition 5 of Planning Consents APP/W520/C/3238593

1. On 14 April 2022 the Secretary of State awarded a temporary conditional planning consent for the change of use of agricultural land for the stationing of caravans for residential occupation; laying of hardstanding, erection or building and formation of new vehicular access off Brockford Road. A copy of the consent is shown at TAB 1.

2. Condition 5 of the consent states:

The use hereby permitted shall cease and all caravans, structures, equipment and materials brought onto the land for the purposes of such use shall be removed and the land restored to its condition before the development took place within 28 days of the date of failure to meet any one of the requirements set out in (i) to (iv) below:

- (i) *Within 1 month of the date of this decision a Flood Evacuation Plan (the Plan) for the site shall have been submitted for the written approval of the local planning authority and shall include a timetable for its implementation.*

- (ii) *If within 6 months of the date of this decision the local planning authority refuse to approve the scheme or fail to give a decision within the prescribed period, an appeal shall have been made to, and accepted as validly made by, the Secretary of State.*
- (iii) *If an appeal is made in pursuance of ii) above, that appeal shall have been finally determined and the submitted scheme shall have been approved by the Secretary of State.*
- (iv) *The approved Plan shall have been carried out and completed in accordance with the approved timetable. Upon implementation of the Plan the use of the site will accord with it at all times. In the event of a legal challenge to this decision, or to a decision made pursuant to the procedure set out in this condition, the operation of the time limits specified in this condition will be suspended until that legal challenge has been finally determined.*

3. Condition 5 appears to have been introduced as the Environment Agency produced updated information at the hearing of the consents. The updated information included the River Waveney and Tributeries and Hydrology Report (2021), Waveney Report – Hydraulic Modelling Report (2021) and Draft Model outlines for Brockford Road, Mendlesham. A copy of the draft Environment Agency Model outlines for Brockford Road, Mendlesham are shown at **TAB 2**.
4. The Environment Agency Flood & Risk Enforcement Officer identified that he was of the view that there was no evidence that the river Dove had been deliberately dammed, and that

there were frequent reports of the land flooding. The new modelling suggest that Flood Zone 3 is as close as 10m to the road in some parts along this section of the river Dove. The Inspector was required to accept the assertions of the Environment Agency Flood & Risk Enforcement Officer.

5. There have been ongoing discussions with the Environment Agency since October 2021. The Environment Agency is unable to identify why it is supporting development in Flood Zone 3 based on its 2021 modelling in other areas of the river Waveney, and why a number of LPAs are seeking development of these areas in their local plans.
6. The end result of these discussions with the Environment Agency is that an application is to be made to 'virtually' culvert an area of the river Dove to determine if it would overtop based on the Environment Agency modelling data. The Environment Agency is also being requested to cause the closure / upgrade of the Mendlesham sewerage plant to prevent it releasing water into the river Dove – particularly as this could lead to damage to the aquifer.
7. The area of land where the occupiers of Oak's Meadow have located residential caravans and /or wish to station residential caravans falls within land that the Environment Agency have identified is not likely to be flooded in their draft Model outlines for Brockford Road, Mendlesham, 2021.
8. There will be a lack of dry access to the site based on the draft 2021 Model outlines for Brockford Road, Mendlesham.
9. There is a belief that false information about surface water flood risk was introduced into the Environment Agency datasets

in about 2015 by Local Planning Authorities, and that has caused difficulties.

10. The Environment Agency has not as yet adopted its River Waveney and Tributaries and Hydrology Report (2021), Waveney Report – Hydraulic Modelling Report (2021) and Draft Model outlines for Brockford Road, Mendlesham (or elsewhere). This is shown as **TAB 3**.

11. It will be determined through the application to culvert the river Dove if a very large number of planning applications need to be revoked by Mid Suffolk District Council, and that if the documents produced by the Environment Agency in 2021 are correct.

THE PLAN

TASK	TIMETABLE
Adopt Government Guidance (TAB 4), taking account of Local Guidance (TAB 5, TAB 6)	Immediate
Monitor award of Planning Consents to Properties identified as being in Flood Zone 3 in 2021 by the Environment Agency, and requirement for evacuation plan.	Ongoing (Year 0 – Year 3). Produce report for Mid Suffolk District Council.
Continue Discussions with Environment Agency	Years 0 – Year 3)
Apply for Consent from the Environment Agency to Culvert River Dove	Month 6
Request Environment Agency to shut Mendlesham Sewerage Plant and/or provide a timetable with its occupiers for its upgrade to meet environmental legislation	Month 6

Dear Mr Carruthers,

Town and Country Planning Act 1990

Appeal by Mr N Shapland

Site Address: Land and premises known as Oak's Meadow, Brockford Road, Wetheringsett cum Brockford, Suffolk, IP14 5NR

I enclose a copy of our Inspector's decision on the above appeal(s).

If you have queries or feedback about the decision or the way we handled the appeal(s), you should submit them using our "Feedback" webpage at <https://www.gov.uk/government/organisations/planning-inspectorate/about/complaints-procedure>.

If you do not have internet access please write to the Customer Quality Unit at the address above.

If you would prefer hard copies of our information on the right to challenge and our feedback procedure, please contact our Customer Service Team on 0303 444 5000.

Please note the Planning Inspectorate is not the administering body for High Court challenges. If you would like more information on the strictly enforced deadlines for challenging, or a copy of the forms for lodging a challenge, please contact the Administrative Court on 020 7947 6655.

The Planning Inspectorate cannot change or revoke the outcome in the attached decision. If you want to alter the outcome you should consider obtaining legal advice as only the High Court can quash this decision.

We are continually seeking ways to improve the quality of service we provide to our customers. As part of this commitment we are seeking feedback from those who use our service. It would be appreciated if you could take some time to complete this short survey, which should take no more than a few minutes complete:

https://www.surveymonkey.co.uk/r/Planning_inspectorate_customer_survey

5

Thank you in advance for taking the time to provide us with valuable feedback.

Yours sincerely,

Corrina Clements

Appeal Decisions

Hearing Held on 12 & 13 October 2021

Site visit made on 13 October 2021

by **R J Perrins MA**

an Inspector appointed by the Secretary of State for Communities and Local Government

Decision date: 14 April 2022

Appeal Ref: APP/W3570/C/3238593

Oaks Meadow, Brockford Road, Wetheringsett cum Brockford Suffolk

- The appeals are made under section 174 of the Town and Country Planning Act 1990 as amended by the Planning and Compensation Act 1991.
 - The appeal is made by Mr N Shapland against an enforcement notice issued by Mid Suffolk District Council.
 - The enforcement notice was issued on 6 September 2019.
 - The breach of planning control as alleged in the notice is without planning permission, the change of use of agricultural land for the stationing of caravans (one for residential occupation); laying of hardstanding; erection of building and decking/veranda and formation of new vehicular access off Brockford Road.
 - The requirements of the notice are:
 1. Cease the use of the land for the stationing of caravans; remove the caravans and associated materials and domestic paraphernalia from the land edged red on the attached plan.
 2. Remove the hardstanding and resultant material from the land edged red on the attached plan.
 3. Remove the building and decking (veranda) and all resultant debris from the land edged red on the attached plan.
 4. Permanently 'stop up' the vehicular access on the land edged red on the attached plan by removing the fence, gates and lights from the land and planting a native hedgerow comprising a mixture of hawthorn, hazel, blackthorn and field maple in a double staggered row at a minimum distance of 60mm between the rows; and a maximum of 450mm between the plants; and protected with a spiral guard; supported with a bamboo cane; and planted through a mulch mat.
 - The period for compliance with the requirements is 3 months.
 - The appeal is proceeding on the grounds set out in section 174(2)(a), (f) and (g) of the Town and Country Planning Act 1990 as amended.
-

Decisions

1. It is directed that the enforcement notice be corrected; by the substitution of the plan annexed to this decision for the plan attached to the enforcement notice; by the deletion of the words and brackets "(one for residential occupation)" in Section 2 of the notice and replacement thereof with the words "for residential occupation"; and by the addition of the words "for residential use" after the words "stationing of caravans" in requirement 1 of the notice.
2. Subject to these corrections the appeal is allowed, and the enforcement notice is quashed. Planning permission is granted on the application deemed to have been made under section 177(5) of the 1990 Act as amended, for the development already carried out, namely, the change of use of agricultural land for the stationing of caravans for residential occupation; laying of

hardstanding; erection of building and decking/veranda and formation of new vehicular access off Brockford Road, on the land shown edged red on the plan annexed to this decision, and subject to the conditions set out in Annex A to this decision.

3. No further action is required in respect of the appeals on grounds (f) and (g).

Preliminary & Procedural Matters

4. Oak's Meadow is one of a several Gypsy and Traveller sites along this section of Brockford Road near the village of Mendlesham. The Council have served eight enforcement notices which have resulted in numerous appeals¹ concerning eight adjoining plots where occupants and owners are either related or are well known to one another and, save for one appellant, have employed and retained the same planning agent. With agreement of the parties, all the appeals were heard at the same time with generic issues being dealt with together.
5. I visited all of the sites on the second day with the parties. I also took the opportunity to view the site from the public domain prior to the Hearings and following the Hearings during the hours of darkness. Separate appeal decisions will be issued for each site. Nevertheless, these preliminary matters apply to all the appeals save for where I have set out any particular issues relating to individual plots. Subsequent to the Hearings, the appeal that was not heard along with the others, was withdrawn.
6. Initially appeals were being advanced on all grounds of appeal for all of the sites (save for where particular circumstances are highlighted in the respective decisions). However, it was agreed at the Hearings that the appeals on grounds (b), (c), (d) and (e) were generally founded on the growing of grass. That matter had arisen largely because of previous, and now withdrawn, enforcement notices that were served on the same plots and referred to the growing of grass.
7. Although, save for two of the notices, the reference to growing of grass has been removed. The parties agreed, in respect of Two Oaks and the plot known as One Acre Stables, where reference to removal of grass in the requirements subsists, that if I were to amend the notices to delete the reference to growing of grass no prejudice would occur. I saw no reason to disagree with that view and informed the Hearings that I would proceed on that basis. In that light all of the appeals on grounds (b), (c), (d) and (e) were withdrawn.
8. In addition, given the time that has passed since the enforcement notices were served, it was agreed that the plans attached to the notices were generally inaccurate. Given the lack of mapping data available for the plots, erection of fences and movements of boundaries between plots over time, the lack of accuracy cannot be criticised. It is nevertheless incumbent upon me to ensure the notices are right. The parties agreed that new plans were required, and the Council submitted an agreed new plan for each plot. I am satisfied that correcting the notices by replacing the plans would also not lead to any prejudice. I have proceeded on that basis.
9. The appellant has expressed concerns regarding the Council's Scheme of Delegation and the service of the previous notice. However, as set out in my

¹APP/W3520/C/19/3238574/575/576/577/578/579/580/581/582/589/590/591/593/594/595/596/597/ 598/600 & 601

first pre-hearing note, the appeals before me are in respect of the September 2019 notices, not those withdrawn. Moreover, and in any event, the judgment in *Britannia Assets (UK) Ltd v SSCLG* [2011] EWHC 1980 (Admin) sets out that the proper course to challenge the issue of an enforcement notice is by judicial review. It is not a matter for my deliberations.

10. There is no dispute that the intended occupiers would currently fall within the definition of gypsies and travellers² as set out in the glossary to Planning Policy for Traveller Sites (PPTS), such that this is a relevant material consideration in the determination of the appeals. I have determined the appeals on this basis. The starting point is therefore whether the sites are suitable, in principle, as a gypsy and traveller site for occupation by persons meeting the PPTS definition.
11. With regards to this appeal there is no dispute that the appellant is a new age traveller who has had to cease travelling for personal reasons. I see no reason to disagree with the Council that he meets the definition above.
12. The development on site is as set out below and the notice seeks to enforce against caravans a building and decking/veranda. I note the appellant refers to a 'house' in the drawings submitted but no case has been put forward to establish that a house exists on site. I have therefore determined the case on the basis that a caravan is in situ albeit now apparently encased in timber with added buildings, decking and veranda.
13. Finally, also with regards to this notice, it alleges the 'the stationing of caravans (one for residential occupation)'. The courts have held that where a notice does not state the use for which a caravan is stationed, it should be corrected provided there would be no injustice. The appellant has appealed on the basis the land is to be used for the stationing of caravans for residential use and the Council have had the opportunity to respond to that case. Therefore, I am satisfied that amending the notice to reflect the residential use, including within the requirements, would not lead to any prejudice.

The appeal on ground (a)

Main issues

- The effect of the development on the character and appearance of the countryside location.
- Whether the development would comply with planning policy which seeks to steer new development away from areas at the highest risk of flooding.
- Whether the appeal site is situated within a sustainable location.
- whether there are any other considerations to outweigh any harm identified.

Reasons

Character and appearance

14. The site is within open countryside to the east of Brockford Road a rural but busy road leading to the A140 from the nearby village of Mendlesham to the

² Persons of nomadic habit of life whatever their race or origin, including such persons who on grounds only of their own or their family's or dependants' educational or health needs or old age have ceased to travel temporarily, but excluding members of an organised group of travelling showpeople or circus people travelling together as such.

south-west. To the north is an existing caravan park, farm and a small number of individually styled large, detached dwellings in generous plots. Further dwellings can be found to the south-west along with the Grade II listed building Mendlesham Manor.

15. The road frontage is predominantly open countryside, hedgerows and mature trees providing an attractive green corridor. A public right of way leads from the southern end of Brockford Road, near to Mendlesham Manor, to the village. The right of way is accessed near to the junction of Brockford Road with an unnamed road which bridges over the River Dove and leads east to the A140.
16. The rear boundary of the plot is defined by the River Dove and adjoining plots share the north and southern boundaries. At the time of my visit the site was well-maintained with, without evidence to the contrary, a timber clad static caravan with raised decking, balustrades and additions. An area of hardstanding serves the site along with a number of sheds, fenced areas for livestock and associated shelters. Some soft landscaping can be found within the site along with a high level close boarded fence on the northern boundary and an open fence to the south.
17. Policy H7 of the Mid Suffolk Local Plan 1998 (LP) and Policies CS 1 and CS 2 of the Mid Suffolk LDF Core Strategy 2008 (CS) set out a settlement hierarchy and seek to protect the landscape quality and character of the countryside for its own sake, by restricting development in the countryside to that which is essential to the efficient operation of agriculture, forestry and appropriate recreation. Policy CS 5 sets out that all development will maintain and enhance the environment and local distinctiveness of the area.
18. The caravan, buildings, sheds, domestic paraphernalia, car parking, hardsurfacing, close boarded fencing, and non-native landscaping are at odds with the countryside location and wider rural landscape. The change of use has harmfully impacted the visual amenity in the locality, introducing development where none existed. Views are readily available from the public domain where the site is a stark contrast to the surrounding countryside, leading the viewer to question how it came to be.
19. To that end PPTS Paragraph 26(d) encourages not enclosing a site with so much hard landscaping, high walls or fences that the impression is given that the site and its occupants are deliberately isolated from the rest of the community. This implies that sites should not be completely hidden and some degree of visibility is to be expected. The fencing and gates are at odds with that, giving the impression that the site (along with the other unauthorised plots) is isolated from the nearby community.
20. Whilst I recognise landscaping would, in time, screen the close board fencing, it would remain an unnatural form in this rural setting. I also accept the site could be reconfigured, as set out below, but that would not overcome the harm I have identified; incongruous development would still prevail in a location where there was no development previously. I accept that landscaping secured by way of condition may reduce that harm, however, there is nothing before me to suggest such landscaping could be accommodated within the site and outside of the flood plain (as discussed below) in any event.
21. Alongside that, and notwithstanding the arguments advanced on site, I am not convinced, given the lack of any accurate drawings, that there would not be

south-west. To the north is an existing caravan park, farm and a small number of individually styled large, detached dwellings in generous plots. Further dwellings can be found to the south-west along with the Grade II listed building Mendlesham Manor.

15. The road frontage is predominantly open countryside, hedgerows and mature trees providing an attractive green corridor. A public right of way leads from the southern end of Brockford Road, near to Mendlesham Manor, to the village. The right of way is accessed near to the junction of Brockford Road with an unnamed road which bridges over the River Dove and leads east to the A140.
16. The rear boundary of the plot is defined by the River Dove and adjoining plots share the north and southern boundaries. At the time of my visit the site was well-maintained with, without evidence to the contrary, a timber clad static caravan with raised decking, balustrades and additions. An area of hardstanding serves the site along with a number of sheds, fenced areas for livestock and associated shelters. Some soft landscaping can be found within the site along with a high level close boarded fence on the northern boundary and an open fence to the south.
17. Policy H7 of the Mid Suffolk Local Plan 1998 (LP) and Policies CS 1 and CS 2 of the Mid Suffolk LDF Core Strategy 2008 (CS) set out a settlement hierarchy and seek to protect the landscape quality and character of the countryside for its own sake, by restricting development in the countryside to that which is essential to the efficient operation of agriculture, forestry and appropriate recreation. Policy CS 5 sets out that all development will maintain and enhance the environment and local distinctiveness of the area.
18. The caravan, buildings, sheds, domestic paraphernalia, car parking, hardsurfacing, close boarded fencing, and non-native landscaping are at odds with the countryside location and wider rural landscape. The change of use has harmfully impacted the visual amenity in the locality, introducing development where none existed. Views are readily available from the public domain where the site is a stark contrast to the surrounding countryside, leading the viewer to question how it came to be.
19. To that end PPTS Paragraph 26(d) encourages not enclosing a site with so much hard landscaping, high walls or fences that the impression is given that the site and its occupants are deliberately isolated from the rest of the community. This implies that sites should not be completely hidden and some degree of visibility is to be expected. The fencing and gates are at odds with that, giving the impression that the site (along with the other unauthorised plots) is isolated from the nearby community.
20. Whilst I recognise landscaping would, in time, screen the close board fencing, it would remain an unnatural form in this rural setting. I also accept the site could be reconfigured, as set out below, but that would not overcome the harm I have identified; incongruous development would still prevail in a location where there was no development previously. I accept that landscaping secured by way of condition may reduce that harm, however, there is nothing before me to suggest such landscaping could be accommodated within the site and outside of the flood plain (as discussed below) in any event.
21. Alongside that, and notwithstanding the arguments advanced on site, I am not convinced, given the lack of any accurate drawings, that there would not be

significant tree and hedgerow removal as a result of instigating the sight lines required to ensure long-term highway safety. Such removal would compound the harm to the character of the rural lane.

22. For these reasons, I find the development has resulted in unacceptable harm to the character and appearance of the countryside location. That is at odds with the aforementioned policies of the LP and CS along with the National Planning Policy Framework (the Framework) which seeks to avoid isolated homes in the countryside. In addition, the PPTS is clear in that sites enclosed by landscaping and fences should not be given weight in consideration of applications.
23. In addition to the effect during the day, at night the site contributes to light pollution in a location, which I saw from my night-time visit, should be intrinsically dark. It is particularly noticeable when views are taken from the unnamed road to the south. That is also at odds with the Framework which seeks to limit the impact of light pollution from artificial light on intrinsically dark landscapes. Whilst I recognise there are lights from nearby dwellings and other property that does not justify further light pollution. I am also not convinced a planning condition for a lighting scheme, given the amount of development that needs to be lit, for safety alone, would reduce the harm by any significant amount.
24. These matters in combination weigh significantly against the change of use. I come to that view recognising that Policy CS 2 of the CS also refers to a rural exception housing and includes sites for Gypsies and Travellers and travelling showpeople. Nevertheless, it is clear from the CS that such exceptions would only be permitted in exceptional circumstances and where development cannot be met in a more sustainable location. Moreover, there is nothing before me to suggest the site has been identified as such as part of the development strategy.

Flood Risk

25. Policy CS4 of the CS sets out that the Council will support development proposals that avoid areas of current and future flood risk. That is reflected in the Framework which sets out that inappropriate development in areas at risk of flooding should be avoided and where development is necessary in such areas, the development should be made safe for its lifetime without increasing flood risk elsewhere.
26. There was some dispute regarding where the flood zones are in relation to the site. To that end the Council accept that the wrong plans were used initially. However, the Environment Agency (the Agency) appeared at the Hearing with an updated position founded upon updated information including the River Waveney and Tributaries Hydrology Report (2021), Waveney Report – Hydraulic Modelling Report (2021) and Draft Model outlines for Brockford Road, Mendlesham.
27. Before I address that updated position, I recognise that there has been some confusion over various drawings and plans used to determine the flood zones. It has been acknowledged that maps dated 11 April 2019 were incorrect. However, I see no reason to disagree with the Agency's view that the only difference between their flood maps, and that of the Council's, is that the latter includes the factor of climate change. That precautionary approach follows the requirements of the Framework, when looking at the sequential test, to take

into account all sources of flood risk including the current and future impacts of climate change. In that light the Council's maps use the Agency's modelled flood outlines, including climate change, and are a representation of future flood risk.

28. Furthermore, as set out by the Agency, when providing consultation advice to the application, the Agency only commented on present day flood risk. However, the Council are correct to consider the climate change flood outlines when determining the future flood risk to the site and applying the Sequential Test to applications for development.
29. Against that background the appellant has produced calculations for flow rates and their own flood data based upon a drone topographical survey which, in the appellant's view, suggests that the land would not be subject to fluvial flood risk and banks are sufficiently high such that there would be no overtopping. I accept the levels shown on the topographical plan submitted for the site show higher datum points nearer to the river.
30. I have also considered the drawings submitted by the appellant which would confine the development to what they consider to be Flood Zone 1. That is to say within an area of land 35m from the road. However, the Agency evidence contradicts that, along with submitted photographs of flooding. Whilst it's suggested that the flooding shown was as a result of the Dove being dammed further downstream, the appellant accepted that there was flooding on lower parts of the land. In addition, the incident report concerning the conifer trees is inconclusive and does not suggest that the conifers caused damming of the Dove as suggested. There is no corroborating evidence that they were causing any issue with flow. Also, what I saw on site with regards to the lie of the land, and differences in vegetation growth on a number of the adjacent sites, point to the flood zone being much closer to the road.
31. Furthermore, whilst I recognise the appellant's agent has experience and background in modelling in the Telecoms industry and such knowledge is transferable, the evidence submitted by the appellant has not been tested with any rigour. Whilst the same could be said for the Agency's evidence, there is some inevitability, given the very nature of the Agency, the professional standing of their officers and experience in such matters, that I place greater weight upon it.
32. I have no reason to doubt the Agency's witness who confirmed that the modelling used for their reports and updated position is based upon the best available information they have, including new LIDAR data. Whilst not site specific, the reporting is a valid and adopted approach. Any level of uncertainty is modelled, and reports are to industry standards and recognised by insurers and all involved in managing flood risk.
33. Overall, therefore, whilst the Agency's position has changed from that when consulted on the planning application made in 2019 (ref:DC/19/00542), the Agency's evidence can now be summed up in the statement made at the Hearing. Namely, had an application been made for the development as built, the Agency would have recommended refusal because of the risk of flooding. I see nothing of any weight to bring me to a different view. I say that given the draft Waveney Model Outlines for Brockford Road which show the majority of the land in the 5% (1 in 20) annual probability flood outline, and therefore Flood Zone 3b Functional Floodplain.

34. To corroborate that, I also heard from the Agency's Flood & Risk Enforcement Officer who was of the view that there was no evidence that the river had been deliberately dammed and that there were frequent reports of the land flooding. He was confident that was a regular occurrence. The new modelling suggests that flood Zone 3 is as close as 10m to the road in some parts along this section of the River Dove. Indeed, the Environment Agency originally considered, when responding to the appellant's 35m assertion, that flood zones came to within 19m of the road and predominantly within 25m prior to the newer data becoming available. In addition, he pointed out that much of what had been constructed within 8 metres of the river including re-profiling of the land, fencing and buildings, had been done without a permit and had led to environmental harm, that was unchallenged.
35. All of these factors lead me to the view that a large part of the site is in Flood Zone 3. The Planning Practice Guidance (the Guidance) also sets out that that caravans, mobile homes and park homes intended for permanent residential use are classified as being highly vulnerable in terms of flood risk. In addition, that a Sequential Test should be carried out in order to steer development away from the areas at high risk of flooding. A Sequential Test not been carried out and I am unable to consider flood risk any further in respect of the change of use.
36. Therefore, I must find, the development is at odds with Policy CS4 of the CS and the Framework which is clear in that inappropriate development should be avoided by directing development away from areas at highest risk. This is a matter that weighs very significantly against the development.
37. In coming to that view, I have considered the layout put forward by the appellant which would retain all of development within 35m of the road. Whilst I am not convinced, as set out above, that Flood Zone 1 extends to such a distance into the site, even if I were to accept that on its face, and the development was all restricted to that area, such a scheme would not overcome the other harm I have found to character and appearance and highway safety.

Sustainable location

38. There is no dispute that the site is within 2kms of nearby services in a location away from any settlements. Whilst 2kms is within walking distance for many, the route to the village is not easily accessible by foot because of the lack of footpaths and street lighting along the road. That also applies to the access to the garage and general store to the north. There is nothing before me to suggest that readily accessible public transport is an option either. Occupiers are therefore likely to be reliant on the car as the main mode of transport.
39. The appellant points to some 20 planning applications made to the Council over recent years. It is clear from that list and the appended application details that new dwellings have been given planning permission and access to nearby services given as a reason to approve the application. For example, in 2018 permission was given for *a change of use of the land and siting of up to 10 residential caravans; erection of fencing* at The Caravans Brockford Road. The officer report for that site, to the north of the appeal site, refer to the location as part of the considerations regarding sustainable development.

40. Planning application ref: DC/18/02002 at The Laurels Brockford Road for *use of land for the stationing of mobile home, creation of gravel drive and shared vehicular access* was given planning permission in 2018 without reference, it seems, to the locations being sustainable or not. The officer report of a 2016 permission at Latin Hall, Brockford Road ref:3084/16 for *erection of 2 no. dwellings including associated works* refers to the location (south of the appeal site) and states: ‘..the distance necessary to traverse without benefit of the defined pavement is relatively minor to that extent it would not be a justifiable reason for a refusal of planning permission’. That same report also refers, at that time, to an inability to demonstrate a 5-year land supply of housing.
41. The other sites also have various reasons as to why they were granted planning permission. Looking at the three I have highlighted I note that two of the sites were closer to the village than the appeal site and The Caravans had an extensive planning history. Whilst I can understand the appellant may be frustrated by what appears to be contrary decisions, all of the planning decisions flagged will have taken into account any number of considerations that may, or may not, be similar to the deliberations for this appeal. It seems to me that the much-rehearsed planning adage that each case must be decided upon its own merits applies once again in this case.
42. Furthermore, the appellant has not set out in any detail the number of vehicles that would use the site or the frequency of trips which. At the Hearing I heard that an average number for all of the sites subject of the current appeals generate on average six vehicular trips per day but there is nothing before me to corroborate that figure.
43. The PPTS anticipates the likelihood of rural sites in the countryside and the Framework recognises that opportunities to maximise sustainable transport will vary from urban to rural areas. However, there will inevitably be an increase in vehicular movements which is at odds with Policy CS10 of the CS which seeks appropriately located sites and Policy H7 of the LP which places strict control over proposals outside of the settlement boundary. It would also be at odds with the core principles of the Framework that seek to actively manage patterns of growth to make the fullest possible use of public transport, walking and cycling.
44. I have also considered Policy CS 2 of the CS which refers to development in the countryside and amongst other things that rural exception housing including sites for Gypsies and Travellers and travelling show people. However, there is nothing before me to corroborate the view that the site falls to be considered as an exception site as set out in the development plan.

Other matters

45. The Council raise no particular concerns regarding highway safety. Further, I have no reason to doubt the views of those who occupy some of the caravans along this section of road, that the presence of those occupying the caravans, has added to the personal safety of those children using the highway. Furthermore, the traffic count supplied by the appellant was undisputed and whilst it is unclear what the speed limit is over the entire length of the road I accept that the Highway Authority is satisfied that there would be no harm to highway safety, provided sightlines were agreed and implemented by way of planning condition.

46. However, with regard to highway safety, the matter of sightlines was discussed on site which raised some concerns. Namely, without any accurate plans depicting vegetation, it seems that the consideration of sightlines has not taken into account, in any detail, the trees and shrubs on the road frontage. The officer report, to the original planning application, refers to roadside vegetation and from what I saw on site, there seems to be some inevitability that such sightlines would require the removal of shrubs and mature trees. That would lead to further unacceptable harm to the character and appearance of the locality and adds further weight against the change of use.
47. I have considered all of the large number of documents, plans, drawings, references to judgements and extracts from various documents submitted by the appellant but find nothing to alter my findings on the main issues.

Other considerations

Need

48. At the Hearing there was some discussion around the issue of need for gypsy and traveller sites within the district. The *Gypsy, Traveller, Travelling Showpeople and Boat Dwellers Accommodation Needs Assessment (ANA) for Babergh, Ipswich, Mid Suffolk, Suffolk Coastal and Waveney (GTAA)* was commissioned by the Council and published in 2017 to provide evidence to support the need for permanent and transit sites and moorings for the period 2016-2036. The data therein was gathered through interviews with available site occupiers.
49. The GTAA identified that Mid Suffolk needed 9 extra pitches up to 2036. The *Babergh and Mid Suffolk Joint Annual Monitoring Report 2019-2020* identified 88 pitches in the district. Taken on its face that report indicates the need has been met. However, the appellant maintains the GTAA is not a true reflection. The agent has submitted extensive evidence as presented to the examination of the Mid Suffolk Joint Local Plan. In brief that sets out that the GTAA was flawed and is now out of date. Furthermore, numerous applications have been made to the Council for sites which demonstrates an unmet need.
50. I do not doubt the appellant's agent, who has represented a number of gypsy and travellers at appeals. I also heard first-hand from many of those occupying the unauthorised plots in Brockford Road who told me they would have nowhere to go save for the roadside. That was undisputed. Furthermore, I heard anomalies regarding a number of sites. For example, DunRoamin, a site on Brockford Road, being identified for 21 static caravans whereas in reality, on the ground, that was more like 15 to 18. In addition, the Council did not disagree that there were 17 pitches in Brockford and elsewhere that were not taken into account.
51. In face of the evidence heard, and presented, I also gave the opportunity for the Council (who put forward no policy witness) to provide an updated policy position at the Hearing but none was forthcoming. In fact to that end the Council sought to rely on the policy position "which is to be taken on its face". There is some inevitability therefore, that I find a lack of confidence in the GTAA figures being an accurate reflection of the current need.
52. In coming to that view, I note the Council's submission that whether or not there are sufficient sites should not matter and the officer's view that a lack of

sites does not justify occupation of high-risk sites as is the case here. However, that does not exclude the Council from considering such matters outside of a policy vacuum, as they inevitably must form part of the overall balance.

53. Thus, I find the need for additional pitches in the district to be a matter that attracts significant weight.

Alternative Sites

54. The Council have no control over sites in the District as they are all privately owned. However, the Council is reviewing its landholding with potential opportunities for a short-term transit site although no timescales or potential outcomes are put forward. Alongside that I am informed that many of the existing sites are contaminated sites on contaminated land and no sites are available. That view was corroborated by one of the current occupiers at Brockford Road who set out, in some detail, how over a period of two years he had sought a site in the locality to be close to the hospital but to no avail. That was undisputed by the Council who identified no alternative sites save to say that Council housing would be available if required.
55. I also heard from a Parish Councillor who set out that the Parish Council valued their relationship with the Gypsy and Traveller community. Whilst there was nothing specific within the Mendlesham Neighbourhood Plan regarding the provision of an exception site, the Parish Council recognise that the plan, which was due to be reviewed, may change in respect of provision. Although any modifications could take up to 18 months.
56. Furthermore, I was informed that the County Council were resurrecting their review of gypsy and traveller sites and sites could come forward in the future. Although, this was very much at discussion stage with no timescales. Whilst both of these matters indicate potential for more sites coming forward inevitably, without any specific evidence or timeframes, they carry little weight.
57. Overall, there is nothing before me, or from what I heard, that places any certainty on how the immediate needs of those requiring a gypsy and traveller site are going to be met or any timetable for addressing a longer-term solution.
58. This lack of suitable available alternative sites also carries great weight.

Personal Circumstances

59. I recognise the appellant has lived locally for many years and is reliant upon the local community. The land and animals also assist his wellbeing. I recognise that the appellant needs a registered address and access to health care and to live close by to access those services. From what I heard from his neighbours, I am in no doubt that he has nowhere else to go and the alternative of roadside living would have an adverse effect upon health and wellbeing. I therefore attach great weight to the personal circumstances of the appellant.

Balancing exercise

60. I have found the development has resulted in unacceptable harm to the character and appearance of the countryside location. That is at odds with the policies of the LP and CS, along with the Framework and PPTS. Given the extensive nature of that harm, including the effect at night, it must carry

significant weight. The same applies with regards to flood risk which also weighs significantly against the development. The matter of the location of the site and reliance upon the car also weighs, albeit less than significantly, against the use for residential occupation.

61. Matters weighing in favour include the need for the site both generally and personally. That is in the face of a lack of supply and uncertainty around the future supply of sites. I also recognise the unmet need is not certain to be met in the immediate future. These matters in combination carry considerable weight. However, overall, in relation to permanent planning permission, the harms identified are not outweighed by the other considerations raised.
62. However, the considerations in favour of the appeal are sufficient to outweigh the harm on a time-limited basis. Taking account of the site occupier's personal need for a site, and the lack of any available alternative sites, it is necessary to allow occupation of the site to continue for a sufficient time to allow alternative sites provision to be considered, as suggested, through the Council's Joint Local Plan Consultation, the Neighbourhood Plan review and the potential for the County Council to review their sites.
63. This conclusion is in accordance with traveller site policy and personal circumstances. Therefore, it follows that permission should be granted subject to a temporary and 'personal' condition, so that it is only for the benefit of the appellant and their resident dependents.
64. The occupier of the appeal site would lose their home if the appeal were to be dismissed. The appellant would also lose their home at some point if permission is granted on a time-limited basis. I recognise that would represent a serious interference in their human rights. However, having taken into consideration the supply of sites and that I am not satisfied in the short term that there will be sites available, it is likely that the occupiers would have to resort to a roadside existence with poor consequences.
65. Thus, granting a temporary and personal permission is in accordance with the law and pursues legitimate aims of protecting the environment and is proportionate to the situation. I shall therefore allow the appeal on ground (a) to the extent that I shall grant a temporary and personal planning permission with conditions limiting occupation to the site occupiers and to three years and requiring restoration of the site similar to that of the enforcement notice requirements. These are necessary in the interests of environmental protection.
66. Given the temporary nature of the permission it would not be reasonable to impose conditions requiring further landscaping or sightlines. However, it would be reasonable and necessary, to protect the character and appearance of the countryside, to limit the number of caravans on the site, prevent commercial activities, limit external lighting, and the erection of further fences, gates and walls. Given the risk of flooding, and even though this a temporary permission, a condition to secure suitable foul and surface water drainage is necessary along with a flood evacuation plan. Conditions to ensure sufficient areas for turning vehicles and bin storage are also necessary. These will both safeguard the environment and the living conditions of those living on site.
67. I recognise the appellant was seeking, in the alternative, a temporary permission of five years but given the likelihood of policy matters regarding the provision of sites being considered in a shorter term I see no justification for

any more than three years. That, in my view, would give sufficient time for alternative sites or accommodation to be found.

Overall conclusion on the ground (a) appeal

68. For the reasons given above, and having had regard to all other matters raised, I conclude that the appeal on ground (a) and the application for deemed planning permission should succeed for the material change of use, subject to conditions.

69. On this basis there is no need to consider the ground (f) and (g) appeals.

ANNEX A

1. The use hereby permitted shall be carried on only by Neil Shapland and his resident dependants and shall be for a limited period being the period of three (3) years from the date of this decision, or the period during which the premises are occupied by them, whichever is the shorter.
2. When the premises cease to be occupied by those named in condition 1. above, or at the end of three (3) years, whichever shall first occur, the use hereby permitted shall cease and all caravans, buildings, structures, materials and equipment (including hardcore and hardstanding) brought on to the land, or works undertaken to it in connection with the use, shall be removed and the land restored to its condition before the development took place.
3. No more than two caravans, as defined by the Caravan Sites and Control of Development Act 1960 and the Caravan Site Act 1968 as amended, shall be stationed on the site at any one time, comprising no more than one static and one touring caravan.
4. The use hereby permitted shall cease and all caravans, structures, equipment and materials brought onto the land for the purposes of such use shall be removed and the land restored to its condition before the development took place within 28 days of the date of failure to meet any one of the requirements set out in (i) to (iv) below:
 - (i) Within 3 months of the date of this decision a scheme for the means of foul and surface water drainage of the site shall have been submitted for the written approval of the local planning authority and the scheme shall include a timetable for its implementation.
 - (ii) If within 6 months of the date of this decision the local planning authority refuse to approve the scheme or fail to give a decision within the prescribed period, an appeal shall have been made to, and accepted as validly made by, the Secretary of State.
 - (iii) If an appeal is made in pursuance of ii) above, that appeal shall have been finally determined and the submitted scheme shall have been approved by the Secretary of State
 - (iv) The approved scheme shall have been carried out and completed in accordance with the approved timetable. Upon implementation of the approved site development scheme specified in this condition, that scheme shall thereafter be retained. In the event of a legal challenge to this decision, or to a decision made pursuant to the procedure set out in this condition, the operation of the time limits specified in this condition will be suspended until that legal challenge has been finally determined.
5. The use hereby permitted shall cease and all caravans, structures, equipment and materials brought onto the land for the purposes of such use shall be removed and the land restored to its condition before the development took place within 28 days of the date of failure to meet any one of the requirements set out in (i) to (iv) below:

- (i) Within 1 month of the date of this decision a Flood Evacuation Plan (the Plan) for the site shall have been submitted for the written approval of the local planning authority and shall include a timetable for its implementation.
 - (ii) If within 6 months of the date of this decision the local planning authority refuse to approve the scheme or fail to give a decision within the prescribed period, an appeal shall have been made to, and accepted as validly made by, the Secretary of State.
 - (iii) If an appeal is made in pursuance of ii) above, that appeal shall have been finally determined and the submitted scheme shall have been approved by the Secretary of State.
 - (iv) The approved Plan shall have been carried out and completed in accordance with the approved timetable. Upon implementation of the Plan the use of the site will accord with it at all times. In the event of a legal challenge to this decision, or to a decision made pursuant to the procedure set out in this condition, the operation of the time limits specified in this condition will be suspended until that legal challenge has been finally determined.
6. The use hereby permitted shall cease and all caravans, structures, equipment and materials brought onto the land for the purposes of such use shall be removed and the land restored to its condition before the development took place within 28 days of the date of failure to meet any one of the requirements set out in (i) to (iv) below:
- (i) Within 3 months of the date of this decision a scheme setting out: external lighting; areas for refuse/recycling bins storage; and areas for parking, loading, unloading and manoeuvring of vehicles, is to be submitted for the written approval of the local planning authority and the scheme shall include a timetable for its implementation.
 - (ii) If within 6 months of the date of this decision the local planning authority refuse to approve the scheme or fail to give a decision within the prescribed period, an appeal shall have been made to, and accepted as validly made by, the Secretary of State.
 - (iii) If an appeal is made in pursuance of ii) above, that appeal shall have been finally determined and the submitted scheme shall have been approved by the Secretary of State.
 - (iv) The approved scheme shall have been carried out and completed in accordance with the approved timetable. Upon implementation of the approved site development scheme specified in this condition, that scheme shall thereafter be retained. In the event of a legal challenge to this decision, or to a decision made pursuant to the procedure set out in this condition, the operation of the time limits specified in this condition will be suspended until that legal challenge has been finally determined.
7. No external lighting other than that approved under Condition 6 shall be provided without the prior written permission of the Local Planning Authority.

8. No commercial, activities shall take place on any part of the site, including the storage of materials.
9. No fences, gates or walls other than those expressly authorised by this permission shall be constructed.

Your selected location is in flood zone 3, an area with a high probability of flooding.

This means:

- you must complete a flood risk assessment for development in this area
- you should follow the Environment Agency's standing advice for carrying out a flood risk assessment (see www.gov.uk/guidance/flood-risk-assessment-standing-advice)

Notes

The flood map for planning shows river and sea flooding data only. It doesn't include other sources of flooding. It is for use in development planning and flood risk assessments.

This information relates to the selected location and is not specific to any property within it. The map is updated regularly and is correct at the time of printing.

Flood risk data is covered by the Open Government Licence which sets out the terms and conditions for using government data. <https://www.nationalarchives.gov.uk/doc/open-government-licence/version/3/>

Use of the address and mapping data is subject to Ordnance Survey public viewing terms under Crown copyright and database rights 2021 OS 100024198. <https://flood-map-for-planning.service.gov.uk/os-terms>

1 INTRODUCTION

1.1 Background

This plan summarises the Suffolk response to major flood events to allow co-ordinated contingency planning to take place between individual agencies. This plan accords with national policies on flood and coastal erosion risk owned by Department for Environment, Food and Rural Affairs (DEFRA), the [National Flood Emergency Framework for England](#) which covers the development, maintenance, testing and, where necessary, implementation of operational response arrangements and the [flood information services](#) managed by the Environment Agency (EA). The plan also links with the Government Coastal Flood Group: Response and Recovery Guide and the East Coast Flood Emergency Framework.

This multi-agency flood plan is supported by the detailed plans of each agency involved to deliver the roles and responsibilities mentioned later. This plan does not cover the provision of coastal defences that are covered separately in works programmes agreed between DEFRA and local authorities as part of the strategy, '[Making Space for Water](#)'.

1.2 Major flooding incident

A major flooding incident is one involving, or threatening to involve, any of the following:

- The flooding of a significant number of properties.
- A risk to the safety and/or welfare of the public.
- Disruption to critical infrastructure.

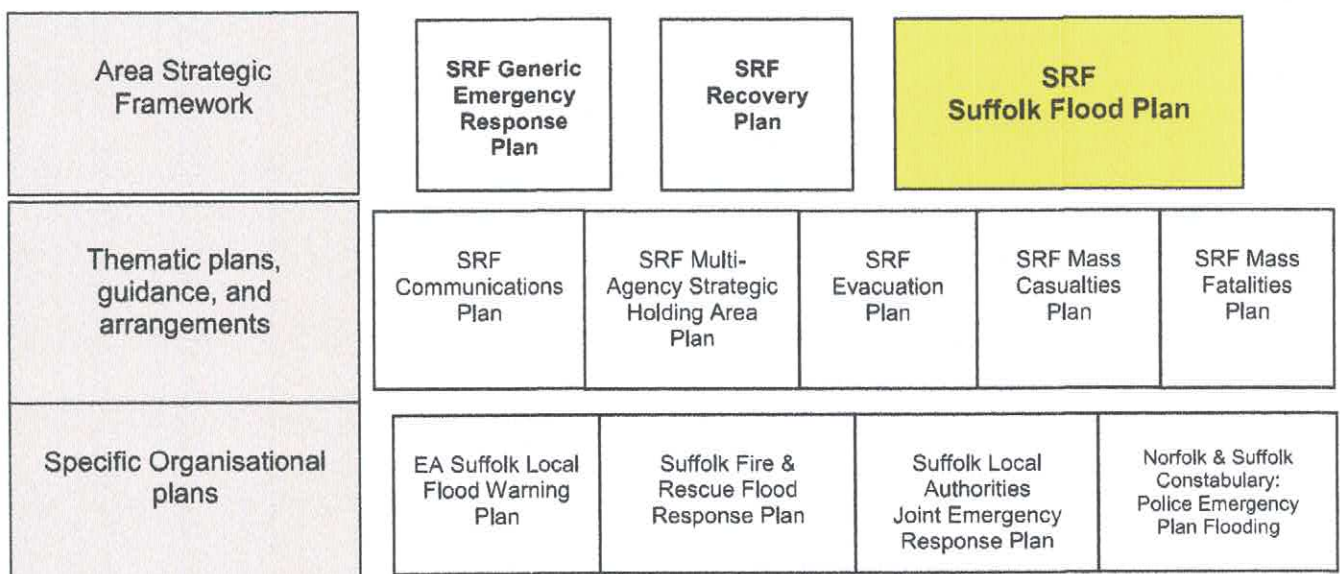

The emergency response encompasses the direct effects of flooding (e.g. rescuing individuals, ensuring the welfare of evacuees) and the indirect effects (e.g. economic disruption, media interest). Depending on the scale of flooding, the response / recovery effort may last for weeks.

This plan does not cover flood risks from:

- Foul sewage
- Burst water main
- Private lakes.

1.3 Related/inter-dependant plans

The diagram below details how this plan links with other SRF and partner agency response emergency plans:

2 AIM AND OBJECTIVES

2.1 Aim

The aim of this plan is to provide a multi-agency framework to coordinate the response plan to a large-scale flood event in Suffolk.

2.2 Objectives

The objectives of the plan are to:

- Identify the types and nature of the flood risk in Suffolk.
- Prepare key parts of the community susceptible to flooding through the provision of advice and information.
- Outline the activation procedures for the multi-agency emergency response.
- Agree areas of responsibility between organisations.
- Manage the wider impact on Suffolk of flooding events to reduce disruption to the countryside, utilities, infrastructure, or communities.
- Outline the actions needed for successful recovery.
- Link to national and neighbouring local Flood Response Plans.

3 RISK

3.1 Risk

The Suffolk Community Risk Register identifies the overall threat of flooding as **MEDIUM**. Therefore, procedures have been developed to reduce or eliminate the risk, and that mitigation exists in the form of multi-agency planning. Flood risk is identified and analysed in three stages:

- Establishing the source of a potential flood hazard, e.g. river, drainage system, or tidal or coastal waters.
- Identifying the paths (pathway) that the source would take during times of flood, and at different levels of flooding. For example, whether the source would run into and fill natural areas like flood plain, be stored in man-made flood areas, or spread into a residential area.
- Evaluating what the impact would be on the people, property and the environment (the receptors) affected by flooding. This includes physical, emotional, social or economic harm.

Risk Description	Risk Level
Flooding: Major coastal flooding	MEDIUM
Local / urban flooding (pluvial or surface water run-off)	MEDIUM
Local tidal flooding	MEDIUM
Local fluvial flooding	LOW

In total, approximately 14,935 properties in Suffolk are at risk of flooding of which 11,736 are at risk on the coast. In addition, many more people who either work in, visit or travel through potentially vulnerable areas, could be unfamiliar with the risk.

As a result of climate change, both the chances and consequences of flooding are likely to increase. Sea level rises, more frequent and higher storm surges, wetter winters and more intense summer rainfall will add to the existing risk and it may not prove possible to improve fixed defences sufficiently to maintain or raise protection standards.

An assessment of the risk of flooding in Suffolk is available on the [SRF Community Risk Register](http://www.suffolkresilience.com/community-risk-register) (www.suffolkresilience.com/community-risk-register).

3.2 Types of Flooding

Sources and types of flood risk in Suffolk include:

- Fluvial flooding (rivers)
- Coastal flooding
- Surface water flooding/pluvial flooding (excessive run-off)
- Groundwater flooding (high water table)
- Reservoir flooding/dam inundation.

In some areas it is difficult to establish the underlying cause of flooding. Increased infiltration and a rise in the water table may result in failure of drainage systems such as sewers; these cease to function properly when experiencing excess groundwater flow. Failure of the drainage system may cause surface water flooding which can increase the level of watercourses and the likelihood of them breaking their banks.

The command and control response structure described in this plan will be used regardless of the type of flooding experienced.

3.3 Fluvial Flooding

River (fluvial) flooding occurs as a result of water overflowing from river channels. The two key factors in fluvial flooding are: the volume of rainfall; and the capacity of the ground and rivers to absorb and transport the water. The 5 main rivers in Suffolk are below:

- The River Stour forms the main part of Suffolk's southern border with Essex and is the longest River in the County. Predominantly rural, there are three main urban centres: Haverhill in the upper catchment, Sudbury on the mid-Stour and Hadleigh on the River Brett, a tributary of the Stour.
- The River Waveney forms the majority of the northern border with Norfolk. The second longest river is again predominantly rural; the main urban centres are Diss, Norfolk at the top of the catchment, Bungay and Beccles at the tidal limit where it becomes one of the Broadland rivers and Lowestoft on the coast.
- The River Lark flows northwards through Bury St Edmunds, into the River Ouse in Cambridgeshire.
- The River Gipping rises above Stowmarket and flows southeast into Ipswich at its' tidal limit where it becomes the River Orwell which flows into the sea at Felixstowe.
- The River Deben rises above Debenham is mostly rural, apart from Woodbridge near the tidal limit.

The east of the county comprises numerous, mostly rural rivers: the Blyth, the Walpole, the Thorpeness Hundred River and the rivers Alde, Ore, Minsmere and Fromus.

3.4 Coastal Flooding

The primary factors for coastal flooding in Suffolk are the low-lying nature of the land, the length of the coastline and the proximity of the population to that coastline. The Suffolk coastline, including the numerous estuaries, is 223 miles long with both defended and undefended floodplains. The defences are owned and maintained by the Environment Agency or Local District Council depending on the stretch of coast. The standard of coastal defences varies from area to area, for more details see the Suffolk Local Flood Warning Plan, owned by the Environment Agency.

Flooding from the sea is most likely during a North Sea Surge event when an area of low pressure, moves eastwards across the Atlantic towards the British Isles, it can raise the level of seawater beneath it by up to a third of a metre. If this 'plateau' of sea water passes north of Scotland and then down into the shallow basin of the North Sea, perhaps further heightened by strong winds from the north, it can cause excessively high surge tides into the Southern North Sea of up to 2 metres. When a surge tide coincides with a spring tide, which occurs twice monthly, flooding would be a serious possibility.

Dependent on weather conditions a storm surge can also create an increased risk of subsequent cliff collapse when strong onshore winds and higher tides erode cliff edges. Management of large sections of the cliff edge rests with Coastal Partnership East, part of East Suffolk Council. They are responsible for promulgating information and warnings through the winter and after significant coastal tide surges.

3.5 Tidal flooding

Suffolk is also affected by tidal flooding. This is where the high water affects the ability of fresh water to drain to the sea, or salt water is forced deeper into fluvial systems. This can cause flooding in some parts of Suffolk:

- Tidal parts of the River Waveney which is part of the larger Norfolk Broads system which can only drain out into the North Sea at Great Yarmouth.
- Rivers Alde and Ore.
- River Deben.

3.6 Surface water flooding

The critical factors for surface water flooding, also known as pluvial flooding, are: the volume of rainfall; where it falls; and its' intensity. In urban areas, sudden and intense rainfall cannot drain away as quickly as it can in rural areas where the soil is exposed. It can also occur where no watercourse exists. Due to its' nature, surface water flooding is hard to predict and the scope for providing warnings is limited.

3.7 Groundwater flooding

In some parts of west Suffolk, due to underlying geology, very high groundwater levels can see ephemeral springs develop or groundwater levels to be such that basement cellars can occasionally be inundated. This tends to occur after much longer periods of sustained rainfall. Higher rainfall means more water will infiltrate the ground, thus causing the water table to rise above normal levels. The main risk area is in the west of the county. When properties suffer from groundwater flooding there is very little that can be done to prevent the water rising. It also takes longer to disperse because groundwater dissipates more slowly than surface water.

3.8 Reservoir flooding / dam inundation

The 'Reservoirs Act 1975' provides a legal framework to ensure the safety of reservoirs. This only applies to reservoirs which hold a certain threshold of water above natural ground level. Under the Flood and Water Management Act 2010, upper tier Local Authorities are required to

prepare specific off-site plans for any reservoirs within their geographical area that have been assessed as being of 'high priority'. There are a number of high risk reservoirs within Suffolk. The Reservoir Emergency Off-site Plans which provides information and instructions for reservoir inundation emergencies within Suffolk are at Annex A.

IF YOU ARE RESPONDING TO A RESERVOIR EMERGENCY, TURN IMMEDIATELY TO ANNEX A FOR ACTIVATION, NOTIFICATION & IMMEDIATE TASKS.

A complete list of reservoirs and relevant contact details are available on the Environment Agency's website available at:

<http://watermaps.environment-agency.gov.uk/wiyby/wiyby.aspx?topic=reservoir#x=357683&y=355134&scale=2>

The maps which have been produced for emergency planning purposes depict the maximum area that could be flooded in the event of a worst-case reservoir failure scenario if the dams completely failed. They are based on a simplified modelling approach. Actual reservoir failure may give rise to conditions (flooded areas, flood depth, extent, velocity, hazard, and timing) which vary significantly from those indicated. The maps show the consequences of reservoir flooding, not the likelihood of the risk of flooding.

3.9 Flooding of property

Flooding can impinge on properties in a variety of ways. The definitions below may help to distinguish between these effects:

- 'Flooded' properties are those in which floodwater has entered the main interior of the home/business. This includes flooding of basements or sub-floors.
- 'Affected' properties are those which have had their exterior damaged by floodwater. Sheds, garages, outbuildings, gardens and walls are included in this category.
- 'Impacted' properties are those where floodwater has caused no actual damage to the interior or exterior, but has had other consequences for the owner (e.g. difficulty in access/egress due to the highway being flooded).

For a map of the Flood risk areas for Suffolk and a list of Environment Agency Flood Alert and Flood Warning Areas, see Annex B.

4 ALERTING PROCEDURES

4.1 Environment Agency Flood Information Services

The Environment Agency provide a continuous flood information service to the public, media, businesses and partner organisations. This service includes:
Monitoring river levels, weather and tidal conditions using Met Office warnings, radar, gauge stations and rainfall levels.

Utilising scientific models to forecast the likelihood of flooding.

The Environment Agency can only provide a flood information service for main-river (fluvial) and coastal (tidal) flooding. They cannot provide a flood warning service for surface water flooding or sewer flooding. The Environment Agency's warnings are disseminated through a variety of mediums e.g. broadcast medium and automated messages. If the usual mediums are unavailable then alerts can be disseminated to the public via alternative means: social media, loud hailer, door-to-door communications, local Community Emergency Teams and telephone operators.

The 'Environment Agency Local Flood Warning Plan' includes information about each of the flood warning catchments areas. Each section contains a map and information about:
Areas affected:

- The number of properties affected
- The probability of flooding
- The communication of flood warnings
- The history of flooding
- The location of flood defences
- The Environment Agency's operational response
- Contingency warning arrangements.

The Environment Agency provides individual warnings to communities in danger of flooding. It is important to note that communities within the county may be issued with different warnings dependent upon the conditions within the individual area.
For more information about the Environment Agency's flood information service (including a list of which organisations receive flood warnings) refer to the 'Environment Agency Local Flood Warning Plan'.

4.2 Flood Warning Codes

"Flood Warning Codes" is the name given to the three stages that the Environment Agency uses to warn the public of impending flooding. They are sent to the media for dissemination and also to resilience partners for information or action. The 'Flood Alert' and 'Flood Warning' warnings used are based on likelihood and timing of different levels of flooding within a community / catchment area. Severe Flood Warnings are based on likelihood and/or impact. They do not relate to the personal impact on individual members of the public. More detail information on the Flood Alert and Warning Codes is at Annexes B and C.

4.3 Targeted Flood warnings

The EA provide a Targeted Flood Warning Service (TFWS) which is a web-based flood warning service to provide organisations with a more targeted and efficient service for a number of registered assets and locations. This service provides email notifications and displays flood warnings relating to relevant assets stored within the system being affected by flood warnings as a stand-by / preparedness notification as well as a stand-down once the risks have receded.

4.4 Environment Agency gauges & river level information

The Environment Agency use gauges on watercourses to monitor river levels. Gauges are strategically located throughout Suffolk. When river levels reach a pre-identified threshold the Environment Agency may issue a flood warning for the relevant area. On-site observation and other factors (e.g. weather conditions) may also be considered before issuing a flood warning. Current river level information can be accessed via the Environment Agency website: www.environment-agency.gov.uk/riverlevels.

4.5 Severe Weather Warnings

The Met Office warns relevant organisations, the media and the public of severe weather through the National Severe Weather Warning Service (NSWWS) - www.metoffice.gov.uk/public/weather/warnings. Severe Weather Warnings are issued when the following types of weather are forecasted:

- Severe gales
- Storms

- Heavy snow
- Blizzard
- Heavy rain
- Fog
- Widespread icy roads, glazed frost, freezing rain.

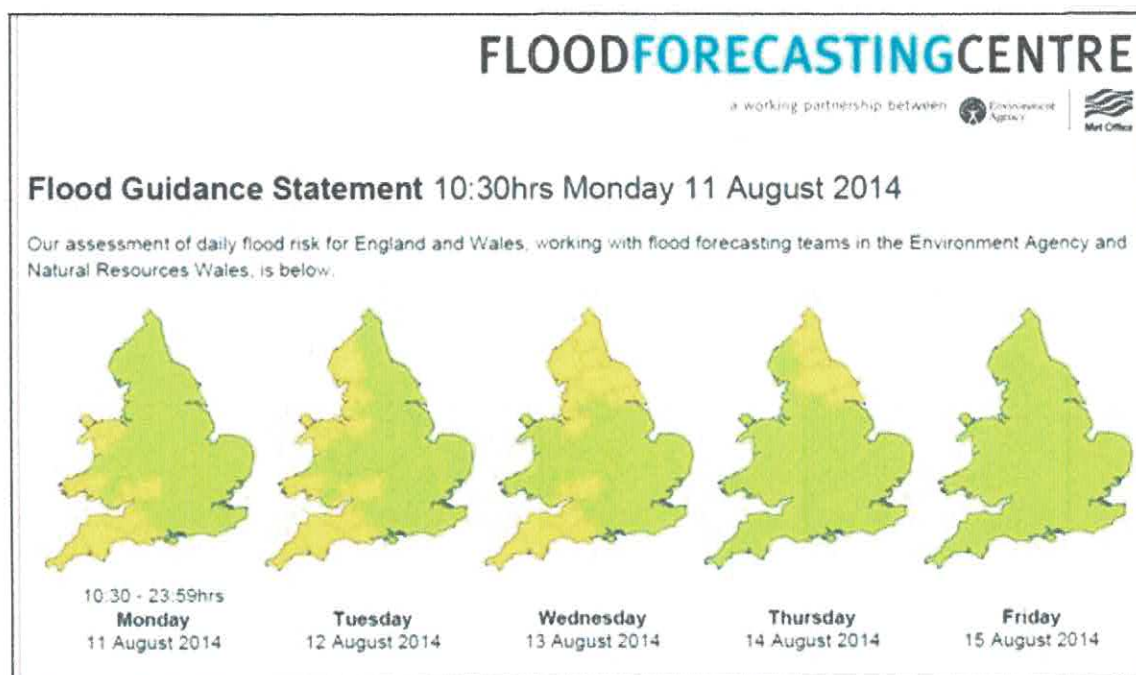

These weather conditions can increase the likelihood of flooding and/or have a detrimental effect on any emergency response. Met Office Advisors (Civil Contingencies) can make media statements regarding the weather.

4.6 Flood Guidance Statements

'Flood Guidance Statements' are issued by the Flood Forecasting Centre (FFC). This service, run jointly by the Met Office and the Environment Agency, aims to provide more accurate forecasts all types of natural flooding - river, coastal, groundwater and surface water flooding.

Flood Guidance Statements (see example below) provide:

- An overview of the flood risk across England and Wales over a five-day period
- A summary of any Flood Warnings and Severe Weather Warnings in force
- A description of the current situation and how it may develop.

If the assessment is YELLOW, the EA will issue a narrative e-mail to key SRF partners giving more local information and the likely progress of the situation. If the assessment is AMBER, this will be supplemented by a Flood Advisory Service teleconference (see below), convened by the EA, to ensure a common picture and understanding of developing flood risk is available. This will enable SRF partners to assess and share flood risk information, coordinate any multi-agency preparatory activity and possibly to consider the need to activate the Strategic and Tactical Co-ordination Centres.

The public can view a version of the FGS for 3 days ahead via Gov.uk - <https://flood-warning-information.service.gov.uk/5-day-flood-risk>.

4.7 Flood Advisory Service

The Environment Agency Flood Advisory Service (FAS) is designed to provide more co-ordinated and consistent information for partners on developing flood risk, to enable them to make more comprehensive decisions on whether to activate flood plans. The service involves a joint teleconference chaired by a local Environment Agency representative, with the assistance of the Met Office Advisor (Civil Contingencies) where possible.

The Environment Agency will decide when to initiate a teleconference based on forecasts in the Flood Guidance Statement e.g. when Suffolk is indicated as a medium (AMBER) risk of flooding, or upon receiving other significant information (See Annex D).

4.8 Met Office Hazard Manager

During a flooding incident, Met Office Hazard Manager may prove a useful tool for responders. Hazard Manager is a web portal providing a one-stop information source for the emergency response community, allowing access to all services in one location. The services currently available on Hazard Manager are:

- Flood Forecasting Centre with extreme Rainfall Alert updates in England and Wales
- Interactive Map Viewer with weather information
- National Severe Weather Warning Service
- Natural Hazards Partnership Daily Weather Assessment
- Emergency Support – this service provides two types of information: up-to-date observations and forecast information and emergency event-specific contents
- FireMet and CHEMET services (approved subscribers only).

When appropriate, the Met Office Advisors (Civil Contingencies) will also send an e-mail to local partners informing them of weather-related risks. In response, the JEPU will consider whether to convene a multi-agency teleconference on behalf of SRF partners to plan and identify any requirement for a multi-agency response.

5 ACTIVATION

5.1 Alerting

Any incident attended to by the Emergency Services has the potential to expand into an emergency or major incident situation. The Emergency Services control rooms have agreed to routinely share incident information with Suffolk Local Authorities (through the JEPU) when a certain level of routine response is reached to provide warning of the potential for a major incident situation and to initiate emergency preparedness arrangements.

Additionally, any Category 1 or 2 responder can also request the convening a formal or informal meeting (known as a GOLD-lite meeting) through the Joint Emergency Planning Unit Duty Officer (EPDO), if they consider that a potential flood incident has been identified, formally or informally, that is likely to necessitate a multi-agency response. This should include all SRF partners (Cat 1 & 2) likely to play a role in a full multi-agency preparedness and response (SCG Checklist).

The Major Incident declaration at paragraph 5.3 below recognises that an early decision by the SCG (full or lite) enables responders to resource and manage the incident. In a 'Rising Tide' event this may entail the formation of the TCG to conduct planning and coordinate the implementation of plans (evacuation or deployment of temporary defences) ahead of predicted events. The SCG is able to provide oversight without having convened at the StratCC as laid

out in paragraph 2.2 of the SRF Generic Response Plan - <http://www.suffolkresilience.com/emergency-plans/generic-emergency-response-plan/>.

5.2 Activation criteria

The triggers that may lead to the activation of this plan are:

- Met Office National Severe Weather Warning
- Environment Agency Flood Warnings (more than one warning forecast or actual Flood Warning in place in SRF area)
- Flood Guidance Statement (YELLOW, AMBER or RED)
- Decision made by organisations participating in a Flood Advisory Service (FAS) teleconference, based on forecast information provided. (See Annex D)
- Higher than average river levels
- Breach of a reservoir affecting SRF area
- Reports of flooding problems within SRF area from other organisations
- High numbers of calls from the public reporting flooding.

This plan may also be activated if flooding affects/or is likely to affect Suffolk in any of the following ways:

- Requiring resources or services not normally/immediately available to the emergency services
- Threatening the health and safety of the public
- Threatening critical infrastructure, such as power and water supplies.
