

We have not done a Daylight / Sunlight Assessment as I do not believe this is necessary for the installation of roof mounted solar panels. The panels will be entirely within the existing roof area and only 3 cm raised above its surface. In addition, the installation of such solar panels would ordinarily be permitted without such an assessment under *The Town and Country Planning (General Permitted Development) (England) Order 2015*. The installation will be done by an MCS certified installer and comply with existing building regulations.
