The Agri-tank is constructed using high specification concrete panels held together by a series of circumferential 7 wire PE-sheeted grease impregnated tendons. The tendon is coated in highly corrosion resistant grease conforming to the recommendations of both the American Post Tensioning Institute and the FIB. The PE-Sheeting is formed by the continuous hot extrusion of high density polyethylene or polypropylene to a minimum radial thickness of between 1.00mm and 2.00mm, again conforming to recommendations of both the American Post Tensioning Institute and the FIB. Seals between each precast panel are made using our patented EPDM compound that when erected form a gasket between the panels and eliminate the risk of leakage.

The building is designed to comply with BS5502 part 50 (Euro 2).
