Dear Sir/Madam

I would like to put a pitch roof on a existing out building and porch roof over the front door and bow window which is existing.

At the moment the out building has a flat roof which leaks and all my electrical boxes and supply come from there. I have drawn a sketch of my proposed work with all dimensions on. Materials would be matching my neighbours pitch roof. Gutters would go into existing downpipes, and gallow bracket joints housed in. Existing roof height at the moment is 2.3 meters new height will be 3.1 meters.

Yours Sincerely
