

Old fence had suffered water damage and was leaning, sagging and rotten It was irreparable and a decision was made to replace the fence.

New fence which replaced the old fence

The new fence features a trellis section which improves the appearance of the fence as well as increasing privacy since there is a ground floor bedroom adjacent to the fence. The trellis also increases security and is a burglar deterrent.

The fence panels are **not** next to a highway used by vehicles (or the footpath of such highway)

The total height of the fence panels including trellis is 1.8m from ground level.
