## Tyelands Ecosystems Services

The purpose of the project is to introduce and maximise the use of renewable energy at Tyelands. The key benefits to the environment are focused on energy use, emissions and making a small contribution to reducing CO2 emissions and climate change. This is reflected in the table below with specific reference to the SD2 policy criteria.

| Ecosystem services actions       | Policy SD2 Criteria |
|----------------------------------|---------------------|
| Installation of renewable energy | E, I, H             |
|                                  |                     |
|                                  |                     |
|                                  |                     |
|                                  |                     |
|                                  |                     |
|                                  |                     |
|                                  |                     |
|                                  |                     |
|                                  |                     |
|                                  |                     |
