

T1 Holm Oak

Side prune long overhanging branches for a) more light; b) less weight on already stressed/decaying leaning tree. Top overhanging branches to the driveway and reduce by 4 metres cutting back to main trunk.

T2 Sycamore

Completely remove tall leggy Sycamore to let more light in and encourage growth of smaller Yew trees underneath the Sycamore.

T3 Beech

Remove 2 self seeded, intertwined, skinny tall Beech trees leaning towards the house for aesthetics and to allow more room for the Oak tree behind it.

T4 Beech

Tidy and remove snapped dead wood and remove overhanging branches across the driveway.
