

Camera Location – Beacon Car Park

Camera positioned where red location mark shown above

Our camera will be mounted on a 100 x 100mm treated timber camera column. As discussed with the client, we would suggest removing the goal post to create a single entrance/exit. The existing fencing would then need to be extended to close off the additional entrance/exit. The fencing would also need to carry on past the goal post to stop motorists parking on the grass verge.
