Location has been determined by manufacturers specifications and will be fitted by manufacturers instructions.

Coucy Wooden Bat Box - Black

SKU 90144

DESCRIPTION

This Wooden Bat Box offers good insulation and easy access via the entrance slot at the bottom.

There are 17 species of bats regularly occurring in the UK [9 in ROI], with the number of species likely to be present in an area decreasing in the north and with height above sea level. Although bats are frequently seen in gardens, many species are in decline due in part to a loss of habitat.

You can help bats by providing additional roosting spaces in the form of bat boxes, and by providing extra food by gardening in a way which favours bats.

For best results, site your bat box:

In a sturdy tree or building where bats have been seen or are known to feed.

In a sheltered area, ideally south or southwest facing to ensure it is exposed to direct sunlight through the day.

Near a wet area, such as a pond or marshy environment which will attract the insects favoured by bats and also provides somewhere for them to drink.

It can take a while for bats to take up residence in a new bat box. As a general rule if it hasn't been used after three years, try relocating.

Vernon 28mm Nest Box

SKU 90765

DESCRIPTION

There is a shortage of natural nesting sites, which is thought to be one of the major factors behind the decline of some of our once most-common birds. By putting up nest boxes, such as this, which replicates a bird's natural nesting preferences, you can encourage them to breed near your home.

Different species prefer different nest boxes and our range has been designed by our team of ornithologists to optimum dimensions for the species concerned. Look out for regular visitors to your garden and choose a box which best suits their needs. You can check this using our [hole size guide](#).

This nest box made from wood has an attractive flamed surface and complimentary black roof. The wood of this series of nesting boxes has been thermally modified by heating in an oxygen depleted environment at more than 180°C. This causes a chemical change in the structure of the wood that increases its durability and, we think, is also very attractive to look at. The lack of oxygen means the wood has been gently carbonised, giving a unique look to each box. It also includes a metal plate to protect the nest from predators.

This 28mm hole nest box will be used by Tree Sparrows, Blue Tits, Coal Tits, Great Tits and Crested Tits.

This nest box is part of the [Texan Nest Box range](#).
