

## **Sewage Treatment Plant Maintenance plan**

### **Every month**

- Check correct function of air blower.
- Check tank (visually from the surface cover) for any signs of blockages, foreign materials or incorrect operation.
- Check distribution chamber between treatment plant and drainage field. Inspect effluent quality visually and confirm effluent is able to flow into the drainage field freely.

### **Every 1 Year**

- Remove and clean debris screen.
- Have sludge pumped out from the tank by licensed company.
- Have a qualified engineer service the treatment plant and test effluent quality.
