

# The proposed buildings

## Compost Toilet

We're proposing to install a purpose-built compost toilet, and have provisionally approached a company called Thunderbox as they have accessible versions and will handle correct installation etc.

They have provided a drawing of the building dimensions. They are updating this design slightly – but it will be smaller rather than larger.

The toilet would be situated about 20m from a tree which is on the boundary of the field, and we are intending to build up some hedging and earthworks to provide some privacy around it.

THUNDERBOX

Our All Access Thunderbox toilet

### The off grid toilet solution suitable for wheelchair users

From forest schools to allotments, our All Access Thunderbox has the advantage of our double unit with two cubicles. One cubicle has step free access via a ramp and is suitable for wheelchair users. The second cubicle has steps and provides additional toilet facilities for communal situations, or storage space if preferred. The large cubicle has a sliding door and also has a male urinal, hand sanitiser dispenser and To Go pack as standard, ready to use. As a larger building, it needs a levelled site and as our team will come and install it for you, they will also need vehicle access, so there will be some sites where one of our All Access Thunderboxes just isn't suitable. Check with us first. A completely off grid compost toilet solution for all users.

4.5m x 2.7m x 3m
