Walnut Tree in Rear Garden

This tree is approximately 8 metres in height, with a canopy spread of approximately 10 metres and a trunk diameter of approximately 500mm.

Recommendations

The tree appears to be in generally good condition with no visual signs of defects. However, the tree is getting large for its location. I would recommend an approximate 20% canopy reduction back to where it's been previously reduced to, to reduce shading in the garden and maintain adequate clearance from the property.
