Likelihood of Failure

VITALITY	V	crown density woundwood response growth	3
ANATOMY	A	wood properties architecture H/D ratio	A
LOAD	L	exposure changes to the tree changes around tree	3
IDENTITY	I	species profile age of wounds CODIT	R
DEFECT	D	soundwood decay - extend feature or fault	R

- Crown normal
- Mature beech prone to pathogens
- No change
- Fairly small troupe of fruiting bodies
- Fungi often results in whole tree failure in leaf

Notes

The highest risk is whole tree failure
