PLANNING DRAWINGS

Tree Protection:
Protected trees shall be protected during the construction works, inline with a 1800mm high Heras fence, with weighted base feet and rakers as required. All fences to be placed 1000mm beyond the canopy of the protected tree.

Fences to be retained throughout the construction works and be retained until such works have been completed. Within protected zones, no material or vehicle trafficking can take place.

Signs to be hung in each section for Heras tree protection fencing with wording similar to the effect of "Tree Protection Zone, Do not enter, Do not remove fence". (Example below)

Fencing to be one of the first operations to take place on site to avoid and accidental damage.
