MEASUREMENTS ARE APPROXIMATE. TREE LOCATION ARE FOR GUIDANCE PURPOSE

Category & Definition	Criteria (including subcategories where appropriate)	Identification on plan
Category A	Trees of high quality with an estimated remaining life expectancy of at least 40 years. Trees that are particularly good examples of their species, especially if rare or unusual or those that are essential components of groups or formal or semi-formal arboricultural features.	Light Green RGB 0,255,0
Category B	Trees of moderate quality with an estimated remaining life expectancy of at least 20 years. Trees that are included in category A, but are downgraded because of impaired condition (e.g. presence of significant though remediable defects, including unsympathetic pest management and storm damage), such that they are unlikely to be suitable for retention for beyond 40 years or trees lacking any special quality necessary to merit or such impaired condition that they do not qualify in higher categories.	Mid Blue RGB 0,0,255
Category C	Trees of low quality with an estimated remaining life expectancy of at least 10 years, or young trees with a stem diameter below 450 mm. Trees present in groups or woodlands, but without the significant greater collective landscape value and/or trees offering low or any temporary/transient landscape benefits.	Grey RGB 091,091,091
