Having been approved for Welsh Government grant funding it was confirmed that second hand material would be allowed. After carrying out research we have settled on this type of bridge as it is an accepted method of easy installation in environmentally sensitive situations with minimal impact on site. Please see attached photos of existing bridges having been installed on different sites using this method. The bridges are purchased as a flat deck and we will be constructing metal side rails to provide safety for livestock and pedestrians. This bridge will be used for private agricultural use only.
