Under Regulation 9 of the Construction (Design & Management) Regulations 2015, Designers are required to include the identification and elimination, so far as is reasonably practicable, of foreseeable risks to the health or safety of any person carrying out or liable to be affected by construction work; maintaining or cleaning a structure; or using a structure designed as a workplace. Where it is not possible to eliminate these risks, the designer must, so far as is reasonably practicable take steps to reduce or, if that is not possible, control the risks through the subsequent design process.

All risks associated with the development and evolution of the design detailed can be found within the Designers Risk Assessments document.
