

Proposed Planting Schedule for Landscape Bund at  
John Brindley Transport, The Close, Sharnford  
Relating to Condition 5 of Planning Application 20/1081/FUL

%	Species	Stock Size	Height	Centres
10	Acer campestre	T 1+1	40 – 60 cm	1m
10	Betula pendula	T 1+1	40 – 60 cm	1m
5	Carpinus betulus	T 1+1	40 – 60 cm	1m
5	Corylus avellana	T 1+1	40 – 60 cm	1m
20	Crataegus monogyna	T 1+1	40 – 60 cm	1m
5	Ilex aquifolium	2L	20 – 30cm	1m
5	Prunus avium	T 1+1	40 – 60 cm	1m
15	Prunus spinosa	T 1+1	40 – 60 cm	1m
15	Quercus robur	T 1+1	40 – 60 cm	1m
5	Sorbus aucuparia	T 1+1	40 – 60 cm	1m
5	Viburnum opulus	T 1+1	40 – 60 cm	1m

Prior to planting the ground will be mown and weeded using an appropriate herbicide. All chemicals must be handled by suitably qualified personnel and all certification must be applied for and approved prior to application. All works must comply with recognised Health & Safety standard and regulations relevant to the control of hazardous substances.

The proposed native mix will be planted in staggered rows at 1m centres. All transplanted stock will be planted with a plastic spiral guard secured using a stout bamboo cane at least 90cm in length. All shrub stock will be planted using an appropriate shrub shelter to be secured using a timber stake and plastic zip tie.

Works should be completed during the October to March planting season and watered to field capacity. Where planting works are required outside the planting season bareroot stock should be substituted for containerised plants. It should be noted that daily watering to field capacity will be required for a period of up to 2 weeks (this may extend in particularly dry/hot periods) for planting outside of season. If a watering facility is not available, it is recommended that the works are delayed until the following October. Planting operations should not be conducted during periods of inclement weather, or when the ground is waterlogged or frozen.

It is the contractor's responsibility to ensure that all stock meets the approved specification. Any stock not to specification will be replaced by the contractor at their expense. Prior to commencing planting works the contractor must familiarise themselves with the site and identify any underground/overground services and drains. If required, the planting works should be altered to avoid any direct/indirect damage to any such features. Planting should not be carried out in locations liable to impact or undermine the foundations of nearby structures or properties. Recommendations for planting distances to properties can be found in Chapter 4.2 of the NHBC Standards. Any such damage (immediate or in the future) to services or property will be the responsibility of the contractor.
