

## **Noise Impact Assessment**

Site: The Tichborne Arms

Proposal: To convert a current grazing field to an overflow car park with sympathetic materials.

Proposed Activities: Using the space as and when the main car park is full. Its Ad hoc and will mostly be at peak times of Trade. The location of the proposed area is adjacent to our existing car park and as such we do not see an increase in current noise.

We will however have signage up asking people to respect the local area upon leaving.
