The proposal to the West Garden includes a new glasshouse on the inside of the new walled garden that takes advantage of the south facing and sheltered aspect.

The glasshouse, for which indicative elevations and plans have been submitted separately as part of the wider application, would be a three-quarter pitch lean-to against the new wall that surrounds the west garden.

The new location for the glasshouse is an improvement on the existing glasshouse, which is proposed to be removed under the application, as it receives less shade from the Lime trees to the west. The glasshouse shall be used for growing fruits and vegetables for the family and also growing seasonal exotics and ornamentals for the house.

The proposal allows for the glasshouse to be either tropical hardwood or painted aluminium. Power and water connections, that are already situated in this area of the garden, shall allow for winter heating and summer irrigation.
