Insulated Lime Plaster

FLEXIBLE, BREATHABLE, SUSTAINABLE

Warmcote is an insulated versatile ultra-lightweight lime plaster.

It can be used on its own on solid backgrounds or as a base coat for a Limecote finish.

- Minimal shrinkage, so can be used to deep fill damaged masonry or clay substrates
- A perfect base coat for metal/wooden lath, finish with Limecote
- Heat resistant, ideal for use on fireplaces especially with log burners

DIRECTIONS FOR USE:

Pour no more than 7 litres of clean water into a mixing tub.

Gently add **Warmcote**, mixing with a plasterer's paddle, do not add all of the dry plaster at once, bring gradually to the required consistency. If necessary add more water.

There is no 'right or wrong' amount of water to add, it can be used at whatever consistency best suits the job, be it thinned down for spraying or thick enough to hand trowel.

Once **Warmcote** is uniformly mixed, gently add all the fibres from the small bag and mix thoroughly.

Ensure that the background is clean and free from loose and friable material.

Lightly damp down, avoiding a film of water on the surface.

For further user guidelines and top tips, please refer to the data sheets at www.bestoflime.co.uk
